I have reviewed the material compiled for Dr. Opferkuch of MRC on PCB removal from aqueous streams. The material is filled with data on plant PCB losses, dates, flows, etc., necessary for report preparation on this research, particularly in the tabular attachments. I would, however, believe that this detailed information would be necessary for preparation of a proposal for a research grant from the EPA. The deletion of such information would probably render the document useless to Dr. Opferkuch.

I am forwarding this document to you for your review and comments. Please either forward this on to MRC or return it to me as this copy is the only one available.
