Q Now, if you were lazy like me and you didn't want to read 117 pages, you could wait a year and read the short version of it, right, Cliff Notes?

A They published a shorter version of it, yes.

Q Okay. That was published in 1939 in the literature?

A Yes.

Q And what they do, Dr. Dreessen and Dr. Sayers, again, they take this long one and condense it or make a synopsis of it?

A Yes. It is more like a book report than anything else.

Q Like a Cliff Note, like I said?

A Almost like a Cliff Note.

Q At the end of the 1939 article that was published, they, again, do a conclusion. And this time they say it appears that if asbestos dust concentrations in the air breathed are kept below five million particles per cubic foot, new cases of asbestosis will not appear.
