R. H. Munch - 1760  
J. R. Savage - B2NB  
Q. E. Thompson - T3E

Jim Savage noted that the Aroclor TCC upset occurred after the biphenyl column trays at Anniston were blown out and the TCC decreased after getting the trays in the biphenyl column repaired. Ralph Munch noted previously commercial chlorinated naphthalene added to Aroclor was bad for power factor.

Can we follow up on biphenyl purity or impurity as a source of TCC by analysis and by making known chlorinated compounds, adding to good Aroclor to measure TCC and power factor.
