Terry Davies of CEQ called to say that they are moving ahead in their attempts to block imports of PCB for unauthorized uses. Gordon MacDonald of CEQ is in Paris now undertaking direct approaches (bilateral agreements in government parlance) with the European countries where PCB is produced. Terry will let us know what these approaches produce.

Also, they are continuing to pursue the matter through OECD which is recognized to be a slow track.

CEQ has obtained through the Department of Commerce proof of PCB importation last year in moderate quantities. It is asking Bureau of the Census to prepare a monthly report on PCB and has been assured that this can be accomplished. I assume that you will want to let your own request for such a report stand.
