Subject: RE: Part A Low Boiler Stack CO annual emission breach

Hi [REDACTED],

To update you with our annual CO emission breach investigation. We can confirm that there have been no major changes to our production process and we are still investigating what could have caused increased CO emission levels including:

- Review of CO analysis and uncertainty
- Changes in R22 feedstock
- How we could create more CO within the process focussing on Steam Pyrolysis
- Changes in the low boiler stack fan (i.e. changes in flow impacting mass emission calculations)

As you'll appreciate it's quite a complex process. There was an increase in CO emissions around July 2021, but with no major changes to our production process around this time trying to identify the cause of increased CO emission is proving a challenge.

We'll keep you updated on this.

Kind regards,
[REDACTED]

Subject: Part A Low Boiler Stack CO annual emission breach

Hi [REDACTED]

Please see attached Part A form for Low Boiler Stack annual emissions breach for CO.
Investigation is ongoing into the cause of this. We will include details within Part B form.

Kind regards,
[REDACTED]
