MILWAUKEE

November 15, 1932

Robert Kehoe, M. D.,
College of Medicine,
Cincinnati, Ohio.

Dear Dr. Kehoe:

You may remember that I spoke to you after your exceedingly illuminating paper of October 24, 1932 in Washington, D.C. I happen to have a moderately large group of battery workers under my immediate supervision as well as quite a number of referred cases from other industries throughout the state.

In one of our local hospitals here we have been examining the 24-hour urine of these cases quantitatively for lead, using the old Lederer method and checking the final lead sulphide color with known quantities of lead down as low as .009 mgs. I wonder what you think of this method and just exactly what method of urine analysis you have been using for your recent studies.

Assuring you that I shall appreciate any suggestions that you may have to give to me, I am

Sincerely yours,

Elston L Belknap
