

WHERE RED SIGNALS SAFETY....

"Saucer Test" proves
RED-LEAD is paint to
use for protecting metal...

VAST AREAS of iron and steel ship hulls, highway bridges, gas tanks, railway equipment. What is the best paint for guarding all these metal surfaces?

One engineer after another declares "Pure red-lead!" To quote one of them, "If I wasn't convinced before the 'Saucer Test', I am now."

This test is a simple, practical way to demonstrate which paint gives metal structures the most durable and economical protection.

The "Saucer Test" Kit comes to you free... just send coupon at right. Includes metal saucer and sample of Dutch Boy Red-Lead to test against any other paint you wish. Choose your own conditions. Test under sun, heat, cold, moisture, smoke, fumes, salt air, water.

In a long series of tests conducted by a leading southern railroad, the "Saucer Test" proved that pure red-

lead outlasted other paints tested as a primer by 4 to 1.

But don't take our word for it or the word of others. Put red-lead on the spot yourself. Send for the KIT and see the evidence with your own two eyes... how pure red-lead gives long-time protection and saves money.

DUTCH BOY RED-LEAD

LITHARGE of correct physical character and extreme chemical purity is a necessity in oil-refining. Such litharge is made by the makers of Dutch Boy Red-Lead and Dutch Boy White-Lead. You can always rely on its unvarying uniformity. Our nearest warehouse can give you quick shipment.

Dutch Boy Red-Lead is a fine, highly oxidized red-lead supplied in two forms—paste and liquid. The paste comes in natural orange-red, is readily mixed to brushing consistency, and can be tinted to darker colors. Dutch Boy Liquid Red-Lead (ready for the brush) is available in the natural orange-red, two shades of brown, also in black.
