My dear Bob:

In connection with your recent letter enclosing some correspondence from Mr. Jordan, on the subject of the location of warning signs on pumps, I asked Dr. Sayers for an informal opinion and have received a letter from him, copy of which is enclosed.

This leaves the matter still apparently very much up-in-the-air and I would appreciate your advice as to what, if anything, we should do in the matter.

Very truly yours,

Graham Edgar.

New York, N. Y.

Dear Dr. Edgar:

I regret that my reply to your letter of May 6th has been delayed due to my having been out of the city.

I have discussed the matter of Xactomatic pumps with one or two of those interested who are connected with this office. The first inquiry was as to why the manufacturers of the pumps, who apparently expect to dispose of them to oil companies, did not take into consideration the fact that the labeling of pumps dispensing leaded gasoline is a usual practice and has been for a period of years, and make provision for this in their design. All with whom I discussed the matter thought it was not good policy to place the label on the side of the pump rather than on the front. It was also the consensus of opinion that 15 inches from the ground to the top of the sign was somewhat low. The place for the label indicated on Pump 3, at 40 inches from the ground, seems to be reasonable to all. This is just opinion, and has, of course, no official significance.

With kind personal regards,

Sincerely yours,

R. R. SAYERS
Medical Officer in Charge
