Revision of VCM Work Practice Guideline

Dr. Z. G. Bell, Jr.

The following are my comments on your letter to Dr. F. C. Dehn dated March 27, 1975, subject as above.

While I question the necessity of partially substituting the plant physician's judgement by the mathematical approach recommended taken in Paragraphs 5A2 and 3, I have no objection to providing this information as a guideline for plant management so long as it does not have the effect of abrogating the plant physician's discretionary right provided in Paragraph 5A4.

I would like to point out what appears to be an inconsistency. The six blood studies referred to in Paragraphs 5A2 and 3 are not the same as the five blood studies recommended in Paragraph 3A-E of the October 11, 1974 Work Practice Guideline.

Lastly, I would recommend that, prior to reviewing the comments you receive with "an outside consultant," you discuss the matter further with the FPG Medical Director.
