Dear Gene:

I think you will find that the people from Cincinnati, who are doing work with Dr. Crally on industrial hygiene, particularly as it relates to asbestos, are quite cooperative. A Mr. Jeremiah R. Lynch was the Senior Sanitary Engineer in our plant.

Small sample collectors of dust were conveniently arranged on the workmen's person. Dust count stationary equipment was collected in our fiber preparation area, in our mold room, and in several locations of our finishing department.

We will receive a detailed copy of the findings; however, these might not be available until mid 1968.

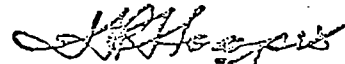

The survey team had no recommended changes in our processes or equipment, nor did they recommend specifics regarding physical examinations. They did interview each person and certainly collected their information in a proper and orderly manner.

We began putting a "hazard" label on our cartons about mid year, 1967 - before we knew of the survey by the Public Health Department.

I hope that this answers your questions.

I also hope you, your family, and all our friends there have a Happy Holiday Season.

Yours very truly,

H. P. Hoopes, Technical Director
Pabco Industrial Products Division
