LOCKPORT NEW YORK

March 9, 1948

Robert A. Kehoe, M.D.  
The Kettering Research Laboratories  
Cincinnati, Ohio

Dear Dr. Kehoe:

In 1943 our Mrs. Lloyd spent two weeks at the Kettering Laboratories, studying stipple cell reading. After returning to Lockport she was able to have the stipple stain made up in our chemical laboratory and the results were very satisfactory. A recent change in chemists, however, has brought about a poorer quality of stain.

It would be very reassuring if we could make some arrangement to purchase the future stock stain from your department. If this can be arranged we shall appreciate hearing from you.

Very truly yours

*Merrill P. Benoit*
