Mr. James Dempsey
Textile Fibers Department
E. I. duPont deNemours, Inc.
Richmond, Virginia

Dear Mr. Dempsey:

Mr. Davis has asked me recently to forward information to you concerning our heat transfer liquid/Therminol FR-1.

The 0.5 - 1.0 mg per cubic meter of air values which we have suggested as a threshold limit for Therminol FR-1 vapors in the working atmosphere, are based on the chronic animal inhalation studies carried out with components of Therminol fluids. I have discussed these values with Dr. J. W. Clayton of your company's Haskell Laboratories this week. I am sure he has all of the data and information to answer any questions which you may have concerning the safety in using the Therminol heat transfer liquids.

If I can be of any further assistance, please do not hesitate to let me know.

Very truly yours,

Elmer P. Wheeler, Manager
Environmental Health
Medical Department
