November 9, 1970

Miss Ann Bures
Chapin House
Smith College
Northampton, Massachusetts

Dear Miss Bures:

In reply to your telephone call last Friday (November 6), I am sending, under separate cover, the bibliography you requested covering recent research work done on various aspects of PCBs. In addition to the list of authors, we were fortunate in having copies of their work available, and I am sending a copy of each author's published work. I'm sure this will save you much time in the research library.

Also included in the package you will receive is some additional material on methodology which we hope will be helpful.

While you are looking over this material, we will be giving some consideration to your request for suggestions on objectives of the project.

When you have an opportunity, write or call us again and let us know what progress you are making toward preparing the program for presentation to the National Science Foundation.

We are pleased that you thought of Monsanto and asked for our assistance. We'll try to be as helpful as we can.

Sincerely,

Edward V. John
Public Relations Manager
Organic Chemicals Division
