Look Ahead with Lead

July 20, 1964

To All Members of the Lead Industries Association, Inc.:

NEW METHODS FOR METAL ANALYSIS

Since our mention in the Lead Information Bulletin last year of atomic absorption spectroscopy as an important new method for the analysis of lead and other metallic elements, there has been a good deal of interest expressed by our members in the subject and a considerable amount of work put into research and development by American manufacturers. We thought you would be interested in some up-to-date information recently made available to us by Perkin-Elmer, the manufacturer who has done probably the most work in developing this equipment in our country.

We hope you find this material of interest.

Very truly yours,

Don G. Fowler
