A I would like to, yes.

Q And fiber release results that you have found here, they don't represent the total lifetime exposure of a person who would have been subject to those exposures, do they?

A No. They would represent various activities to determine what those activities might contribute, and as I think I have alluded to, there are a variety of other possible exposures based on other people doing the work nearby or cleaning up or using air hoses to blow out brakes and things like that.

Q And the last question, Doctor, is the asbestos fibers that are released that are not bound with other materials that Mr. Williams talked about, those would still be respirable and potentially carcinogenic?

A Yes. All of the fibers that we would pick up on the filter, I think, would be respirable.

MR. SMITH: Thank you. That is all I have, Your Honor.

THE COURT: Thank you, Mr. Smith.
