

"GENIE" OF A THOUSAND AND ONE ENGINEERING FEATS

- **AT YOUR CALL IN MANY PHYSICAL FORMS:** light, mobile oily liquids/viscous sirupy liquids and resins/solid resins and crystals.

- **VIRTUALLY INDESTRUCTIBLE:** resist breakdown from heat and mechanical stress/resist burning/rebuff electricity with their high resistivity/refuse to oxidize, volatilize, hydrolyze or otherwise react with highly reactive chemicals.

- **"EDUCATED" TO PERFORM HUNDREDS OF ENGINEERING TASKS:** *heat-transfer mediums* for uniform, firesafe, controlled "cooking" heat to 600°F. in economical nonpressurized systems; *coolant-dielectrics* for "fireproof" transformers and other electrical equipment; *impregnants* in fixed-paper capacitors for air conditioners, furnaces, washers and other home appliances; *insulating sealants* cotton and asbestos wraps, carbon resistors, electrical terminals and bushings; *lubricants* for vacuum diffusion pumps, a foundry car bearings, journal boxes, precision grinding; *expansion mediums* in bellows control, thermostats and regulators *"tack" agents* for fire-resistant wiping cloths, dedusting reactive chemicals, dust catchers on air filters, and other "dust *vapor suppressants* for volatile insecticides, *binders* for pigments and dyes, *bonding agents* in adhesive compounds, *impreg*

Not by sorcery—but by simple effectiveness—a low-cost Aroclor might be exactly the inert liquid or resin you need for a tough engineering job. Monsanto will send you a descriptive booklet, THE AROCLOR COMPOUNDS, which will show you why. Merely write for a copy on your company letterhead.
