

**ENVIRONMENTAL CLOSURE SUMMARY
SAN PATRICIO PLANT**

April 22, 1993

The San Patricio Reduction Plant was permanently closed on July 9, 1986. The environmental closure was reported in February 1989, which is summarized below. Disposal of each item was reviewed and approved by the Texas Water Commission (TWC).

ASBESTOS-

Several contractor specializing in asbestos removal were used to remove asbestos from the power generating plant and other key areas of the plant. The final removal was completed in January 1989. Some small quantities remain in the Chemical Lab and the main office. These were encapsulated to preclude further exposure. At the present I cannot determine if this was ever removed.
