A card record is maintained by D&S Traffic personnel on each tank car in the WGK fleet. Each time one of these cars ships or is received it is posted to this file. Each day, when cars are offered to us by the A&S and TRRA, the tank car dispatcher checks this card record to determine if 1)the car belongs to us and 2)the last product loaded if the car is empty. If Aroclor cars, the dispatcher advises Aroclor department supervision and between them they decide to either leave on hold tracks or spot for load.

The entire Aroclor shipping schedule is reviewed by D&S and Aroclor supervision at least daily and as such both groups are familiar with the numbers of the Aroclor fleet. Another factor which should help minimize chance of error, is that each Aroclor tank car has the attached warning label applied on each end and both sides at ladders.
