Subject	Date
OSHA Release - Friday, June 13, 1986 Sharp Reduction in Permissible Worker Exposure to Asbestos	June 16, 1986

To: Mr. J. L. Anderson - Hillsboro #257
Mr. J. A. Burke - Riverside #260
Mr. D. R. Hall - VF 2125-2B
Dr. B. H. Jo - BB 2126

On Friday, June 13, 1986, OSHA announced that they intended to publish new levels of exposure to asbestos in the Federal Register sometime this week.

Basically, the TWA for asbestos will be reduced from its present value of 2.0 f/cc to 0.2 f/cc.

Attached is a copy of the summary of the new standard. According to the summary, the standard itself is to be 900 pages long, and I will see that you get a copy when it is available.

It is important that you continue to concentrate on the work practices within your plant so that we can maintain values below the 0.2 limit. It appears that should we exceed the 0.2 limit, it will trigger many other actions on our part, such as, change rooms, work clothes, etc.

After I have had a chance to review this information, I will be in touch with you for a more detailed discussion and action plan.
