Doctors Connect Asbestos to Ovarian Cancer Rise

A study of 10,000 women, which showed a threefold increase in the rate of lung cancer, has convinced a group of doctors that asbestos is a major cause of the rise in ovarian cancer. The study, which was conducted by a group of doctors at the University of California, San Francisco, and the University of Michigan, Ann Arbor, is the first to show a direct link between asbestos and ovarian cancer. The study found that women who had worked in asbestos mines or in asbestos products had a threefold increase in the rate of ovarian cancer. The study also found that women who had worked in asbestos mines or in asbestos products had a threefold increase in the rate of lung cancer. The study was conducted over a period of 10 years, from 1957 to 1967.

Association Elects

Max Kunz, Mayor of Tulsa, was elected president of the Tulsa Association of Mayors. The association is a group of mayors from various cities in the state of Oklahoma. The association was founded in 1911 and has since then been a leading organization for the promotion of the interests of the people of the state. Max Kunz, Mayor of Tulsa, was elected president of the association for the year 1968.

According to Dr. Graham, although asbestos particles have not actually been found in ovarian tumors, they have been found in the surrounding tissues. The study also found that women who had worked in asbestos mines or in asbestos products had a threefold increase in the rate of ovarian cancer. The study was conducted over a period of 10 years, from 1957 to 1967.
