Dr. F. B. Lanahan,
Medical Director,
The Electric Storage Battery Co.,
Allegheny Avenue and 19th Street,
Philadelphia 32, Pennsylvania.

Dear Dr. Lanahan:

In Dr. Kehoe's absence from the Laboratory I am enclosing the analytical report on [REDACTED], which are as follows:

Blood - .055 (Spectrographic, Mg. Pb/100 Grams)
.07 (Dithizone) Mg. Pb/100 Grams

These analytical results indicate that the subject has had an abnormal exposure to lead. Without information as to how long this man has been exposed to the conditions which have led to these concentrations it is not possible to guess as to the immediate hazard of his environment other than to say that it is potentially hazardous.

It is not common to have symptoms of lead poisoning in concentrations of this degree, although if this man had had symptoms several weeks before which led to his removal from the hazardous environment, it would not be uncommon for him still to be suffering from some general weakness.

We would appreciate your supplying us with the clinical information about the extent of his exposure and his symptomatology and such further laboratory studies as you have made, as this information would increase the value of the results to us.

Very truly yours,

Henry W. Ryder, M. D.

Name:

Material:

Blood

Submitted:

3-16-48 by Dr. Lanahan, Electric Storage Battery Co.
Allegheny Ave. and 19th Street, Philadelphia 32, Pa.

Required:

Lead Analysis

BLOOD

Analysis Number	-	48A-2391
Weight	-	17.2 Grams
Mg. Pb/100 Grams	-	0.055 (Spectrographic)
Mg. Pb/100 Grams	-	0.07 (Dithizone)

The above analytical results indicate that the subject has had an abnormal exposure to lead, and that his industrial environment is potentially hazardous.

Signed:

W. W. Ryder, M. D.
