RE: Uni-Bell Technical Library Index

The attached memorandum relating to the Uni-Bell Technical Library is self-explanatory and is forwarded for your information. The Library Index itself is in a book about an inch thick and is being retained in our office. If you wish to determine whether the Uni-Bell Library has any article or publication you have an interest in, please call our office.

Because of the large amount of articles entered into your library, we have decided to send you a new, updated Technical Library Index rather than another supplement. As a reminder, the Technical Library Index works in the following way:

Your library is divided into eighteen (18) alphabetical subject headings or sections. Each section is alphabetically subdivided into major category listings shown at the beginning of each tabbed section. Each index page is comprised of six (6) columns. The following descriptions of each column should facilitate your use of the index.

Category: Each section is subdivided into categories which relate to the section heading. (For example, Abrasion, Corrosion, Design, Deflection, etc.)

Title: The title of the article. If the article is a letter or memo, the title is a short description of what the document pertains to. The titles are listed alphabetically in each category.

Author: The last name of the author(s) of the article. In the case of product literature or correspondence without the author's name, the company name is listed.

CTL026982

- Publication:** The magazine the article was taken from. If the article is a technical report not taken from a magazine, the report number is listed.
- Date:** The date the article was published in a magazine or, in the case of letters and memos, the date of the correspondence.
- Locate:** An internal code Uni-Bell uses to locate the document.

Please note that the "Soil/Structure Design" section is the one exception to the above format. This section is organized alphabetically by the author's last name.

We also want to point out that the sections entitled, "Sewer Technology" and "Water Technology" deal almost entirely with PVC pipe, and could just as well have been titled PVC Sewer Technology and PVC Water Technology

If you would like any articles from the library, please send us a request listing the category, title and location of the article. The first 100 pages (any combination of articles) in a calendar year will be provided at no charge. When a request exceeds 100 pages, reproduction charges of 15¢ per single page and 20¢ per double-sided page will apply.

If you have any questions or suggestions regarding the index, please do not hesitate to give me a call. We hope this will add to the value of your Uni-Bell membership.
