SALT LAKE CITY, UTAH

March 2, 1949

Dr. Robert A. Kehoe
Kettering Laboratory
Eden Avenue
Cincinnati, Ohio

*Ordered over Rct
of Containers
Spec 3/8/49*

Dear Doctor Kehoe:

I am writing you in regards to a patient,
Mr. [REDACTED] as result of a telegram sent to
Mrs. [REDACTED] by Mr. E. O. Jones of Ethyl Corporation.

Mr. [REDACTED] has for several years been collecting
samples of gasoline from service station pumps for
analysis by the state.

Mr. [REDACTED] has not been at all well for the
past year. About one year ago he had a severe neuritis,
both arms, particularly his right, which improved and
he returned to work.

Again six weeks ago he began to complain of pains
in his arms and legs, also progressive weakness and
stiffness of joints.

Physical findings were principally moderate anemia
(Hgb. 76%-RBC 4 million) and marked atrophy of supra
spinatus muscles as well as moderate atrophy of the
Thenar and Hypo-Thenar eminences and Interossei muscles
of both hands, also noted weakness of extensor muscle
groups of the wrist and hands.

I have suspected Tetra-Ethyl lead intoxication,
but have not been able to produce any laboratory finding
to back up my clinical impression, particularly as far
as Plumbism is concerned.

If you have anything to suggest or information
about intoxications from Tetra-Ethyl fumes or lead,
I would appreciate very much to hear from you.
