Fleet Post Office San Francisco

Dec. 25, 1918
(Mon)

Dear Kehoe:-

We haven't met any
poison gases, yet - but industrial
or accidental poisoning - zinc welders
fumes, methanol, and recently
explosively inflammable Diesel
oil give me some toxicologic
practice - Would lead solder in the
cooling condenser of a mechanical can
constitute a significant danger of
lead poisoning through the milk?

Happy New Year

Emil Bogen.
