COMMUNICATIONS TO
THE LABORATORIES AT THE ABOVE ADDRESS

24th May, 1940.

Dr. R. A. Kehoe,
Kettering Laboratory of Applied Physiology,
University of Cincinnati,
Cincinnati, Ohio.

Dear Dr. Kehoe,

I am sending you reprints of articles concerning lead poisoning which I have done, together with articles I have written in conjunction with Dr. S. L. Tompsett; no doubt you have seen some of this work already.

I would be very much obliged if you would send me reprints of your most recent work on lead, especially with reference to lead in the blood and urine. I have recently completed my M.D. thesis on this problem, and although my facilities for material have been somewhat limited and are in no way comparable to your own I feel that the results may form a stimulus to further work in this country.

I am at present trying to correlate stippled cell counts and urinary lead values in the excretion of coproporphyrin 3 in the urine, and if you should have any experience of the porphyrin test I would be glad of your advice.

Kindest regards,

A handwritten signature in cursive script, reading 'J.N.M. Chalmers'.
