Home: 345 Resor Avenue, Cincinnati, Ohio 45220 (formerly)

KE 0013086

in order to give Dr. Benison a very good idea of the vast number of projects with which Dr. Kehoe was involved and the great number of people with whom he was in contact.

In addition to the above material, I have also included with Dr. Benison's copy a list of Dr. Kehoe's publications, along with a reprint of a Xeroxed copy of each publication, also a copy of Dr. Ashe's article "Robert Arthur Kehoe, M.D." and a copy of Mrs. Irene Campbell's article "The House That Robert A. Kehoe Built." Where there were extra copies in Dr. Kehoe's files regarding interesting bibliographic material on Dr. Kehoe, the work and the facilities of Kettering Laboratory and the Kettering Graduate School, I included these with the material for Dr. Benison.

In addition to the office files, the big safe in the hall, and the files in the hall, I have looked over some of the material in the big closet in the secretary's office. I would appreciate being able to finish this.

There are also scads of things on two small tables in Dr. Kehoe's office. While I haven't checked this material, I know a lot of it deals with the book (in progress) on the human experiments. The contents of the bookcase in Dr. Kehoe's office shouldn't be of any use to the historian. Most of the material are old work books on experiments and books that can be given to our library.

In Dr. Kehoe's outer office, there are a few wooden boxes which I think should be opened and inspected.

Date: September 30, 1985

I have completed going over all the material in Dr. Kehoe's office and it is being transferred to the historian's area in Wherry Hall.
