L. Stark/PDF

TO : Toby Bell - ANNISTON

F. Fluids will replace chlorinated biphenyls with chlorinated terphenyls to avoid environmental contamination. We therefore want the chlorinated terphenyl free of chlorinated biphenyl or as free as we can make it. I understand that a realistic target is somewhere between .02% and 0.5% chlorinated biphenyl in terphenyl.

Ed Emery will put together his summary of analysis for chlorinated biphenyl in Aroclor 5460.

THIS WILL REVIVE "FDA" 5460.
WE WILL PROBABLY DO NOTHING UNTIL THE LAB CAN ROUTINELY DETERMINE PCB IN SOL. ARO.
