Mr. John Hyde
800 Presque Isle Drive
Pittsburgh, Pennsylvania 15239

Dear John:

The report on results of preliminary measurements of dust concentrations by B & L counter and membrane filter is enclosed. The data are very promising. I suggest that Felix go up to Port Allegany for another day or two to see if these results hold up on another occasion. If they do, I would recommend purchase of the instrument.

Felix has assisted with the drawings, calculations and monitoring. His role in the project, as conceived, is over and a Billing for his work, as originally estimated (\$600) is enclosed. It seems entirely proper to reimburse him at this time.

I'll be back at school on the afternoon of July 1.

Kindest personal regards.

Sincerely yours,

TTT ant/pfh
