

"Clean as a whistle"

that's what you'll say when you examine the bore of your rifle after shooting the new U. S. Self-Cleaning Cartridges.

These new rim-fires leave a barrel absolutely clean inside. A special priming mixture with which they are loaded does the trick.

All you do is give your rifle one final scouring to make sure that it is thoroughly clean at the start. Thereafter fire only U. S. Self-Cleaning Cartridges in it. No more fouling! No more rusting! No more pitting. Gone also is the trouble of cleaning. Sounds too good to be true—but true it is.

By eliminating fouling, rusting and pitting, U. S. Self-Cleaning Cartridges help to keep the bores of fire-arms smooth and accurate. Barrels are not "shot out" so soon.

The line of U. S. Self-Cleaning Cartridges contains the following .22's which may be had with either solid or hollow-point bullet: .22 Short, .22 Long, .22 Long Rifle.

Remember the "Self-Cleaning" when you purchase. Ask for "U. S. Self-Cleaning Shorts," for example.

SELF-CLEANING CARTRIDGES
