

February 20, 1931

Seen by me today in company with his brother. Condition apparently much the same. Has not been able to do any work and has made no attempt to follow my advice by doing so.

Has had grippe recently. Complains of headache, weakness, muscle pains in legs, cramps. Says he dreams, wakening in a "nervous shock". Sees yellow light in front of eyes, and is frightened. Recovers from this quickly. Eyes give him trouble, watering when he reads.

Appetite good. Digestion good

Weight normal.

Blood pressure 125/78

Pulse 80 - regular and of good quality

General condition normal so far as physical signs go.

Reflexes somewhat variable. In general increased response.

Haemoglobin 90. Blood picture normal. Stippling 4 per 50 fields.
