TREASURER

Re: Aroclor Specifications - Comstock & Wescott.

To Mr. Paul Logue:
CC: Mr. Gerber,

The requirements for Aroclor 1848 shipped to this firm are as follows:

90% Distilling from 344°-362°C.
10% " " 362°-370°C.

The rate of distillation is 3 to 5 c.c. per minute on test.

Material has been shipped and found satisfactory where the top distillation was as high as 374°C.

It is believed the accuracy of the distillation is $\pm 3^{\circ}\text{C}$.
