RECOMMENDED DISPOSAL METHOD FOR ASBESTOS

At your request, I reviewed our files for the recommended disposal method for asbestos.

Du Pont procedure is: "All waste is to be disposed of in sealed polyethylene bags using a landfill. These plastic bags are to be sealed with plastic tape and labelled according to Du Pont Engineering Standard S4T." A copy of S4T is attached.

This procedure is based on the waste disposal provisions of the OSHA Asbestos Standard (CFR 29:1910.1001, copy attached).
