Davis:

Is this of any use for the Voith lathe
or have you come up with anything simpler?

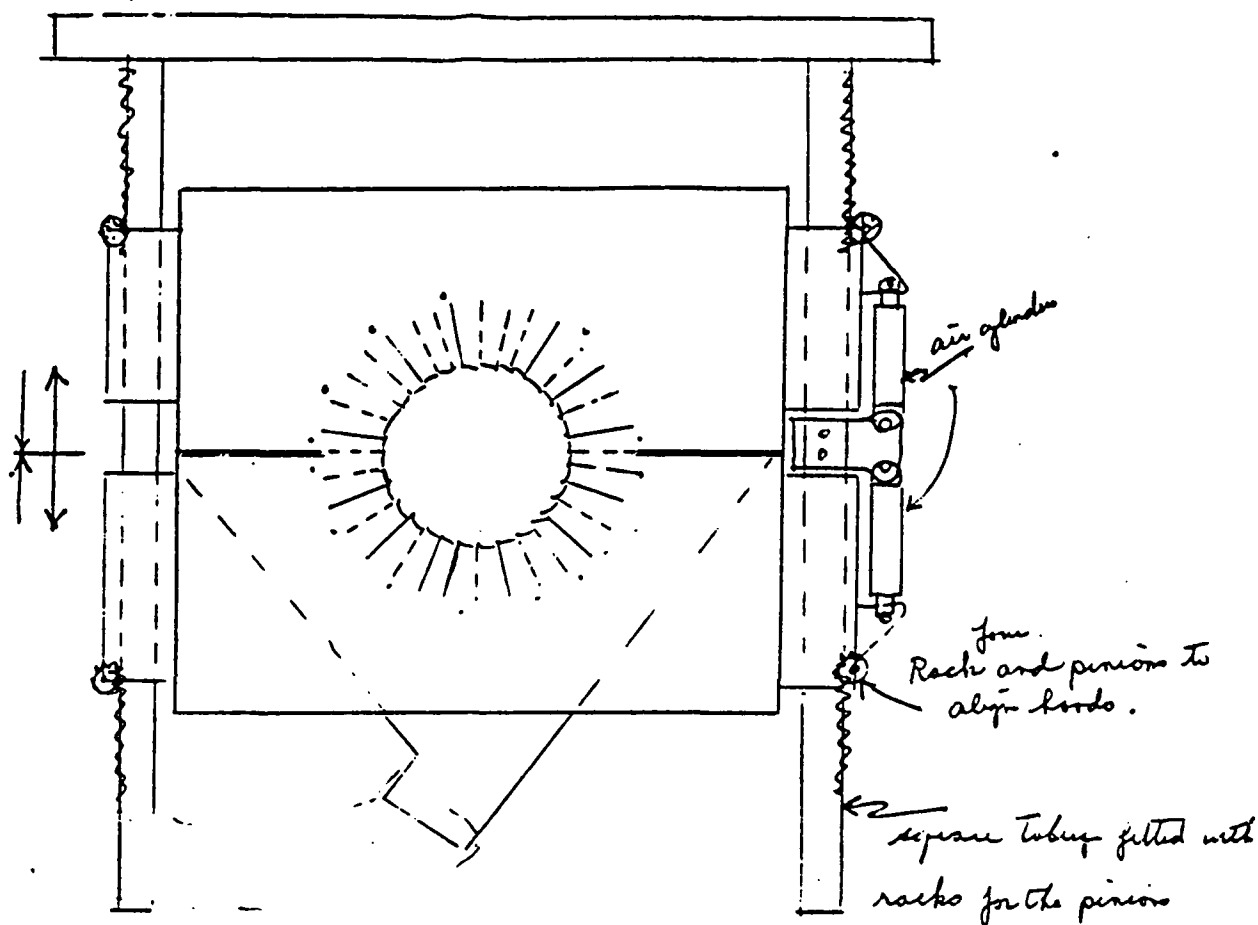

Don?

Sub European Design Dust Hood

door. I requested details of the European type of dust hoods as witnessed on the lothes that appear similar to the lothes on #1 line at Ryland. They didn't send pictures but the schematic above is from memory, and from their written description.

Description The dust hoods ^{and lower} elevate ^{the pipe is} from center line to let the pipe in on the feeder arms. As ~~they~~ ^{the pipe is} being chucked the hoods lower and the bottom raises up, similar to picture. The seal is made by having three circles of $\frac{1}{16}$ in rubber with the slots in the rubber placed behind a solid section of rubber - something similar to the camera shutter seal.

We should investigate this idea along with all others for the European lothe
