The one portion we wanted to show you was, jobs requiring respiratory protective equipment. Number one, dust. Asbestos (as in covering pipes).

This is Number 608, and this is a magazine article offered against Owens-Corning dated April 1944.

THE COURT: It will be admitted into evidence.

(Whereupon, Plaintiffs' Exhibit Number 608 was received into evidence.)

MR. SMITH: The number, OCF number.

Safeguarding workers exposed to respiratory hazards resulting from contact with fumes, dusts, vapors, gases, and mists ranks among the important safety measures on new construction jobs in shipyards.

The use of water repellent asbestos insulation has recently replaced some types of material formerly used in ship work.

For protection against dust or possible asbestosis, it is recommended that such materials be
