

1 transmissions, and these involved friction materials
2 as a portion of the system, yes.

3 Q So that work was after 1959 then?

4 A Yes, that continued until 1963.

5 Q Okay. What did you do starting in 1963, do
6 you recall?

7 A 1963 I transferred to a different department
8 and was allowed basically half time, quarter to half
9 time to work on my own projects, and I initiated the
10 project on friction material research because I found
11 it a very interesting area, and I thought brake
12 linings and friction materials were grossly under-
13 researched, so there was a need to do some work.

14 Q I gather then you designed the parameters of
15 that research originally?

16 A For the initial work, yes.

17 Q Okay. What did that project entail?

18 A In 1963?

19 Q Yes.

20 A 1963 basically I was looking in on brake
21 linings and the effect of brake lining differences on
