Mr. Frank S. Bilton
Director of Purchases
Rosco, Inc.
P. O. Box: 6728
Cleveland, Ohio 44135

Dear Mr. Bilton:

Thank you for your inquiry regarding Interpace Wollastonite. We enclose a data sheet, price schedule and general information brochure for your examination. We do not have product sized as you requested be sent to Mrs. Bush. You will note from the data sheet that the coarsest grade is -16 mesh which is pebble mill feed and the next coarsest size is 95% -200 mesh, except for F-1 grade which is a fibrous material, fluffy in texture, and relatively low in bulk density. The ore must be reduced to 16 mesh to liberate the Wollastonite from a garnet inclusion which is removed by high intensity magnetic separation. Please advise us which grade will best suit your requirements.

Very truly yours,

INTERPACE CORPORATION
Industrial Minerals Division
