Operation Report
Dept. 246 - Aroclor
May - 1963

Aroclor production was 1,696,260 pounds which was 107% of schedule. The yield on biphenyl was 98.3% of theory (Std. - 93.7%). The new air cooled heat exchanger developed by PTS and installed in May to one of five chlorinators performed even better than expected. Capacity of that one unit was increased by about 40%

good job!
