WATER CONDITIONING FOR AIR CONDITIONING

Photograph reprinted with permission of
National Broadcasting Company

All water used for washing air picks up corrosive matter from the air. The corrosive matter may be oxygen, carbon dioxide, sulphur tri-oxide or sulphur di-oxide. In air conditioning systems where water is recirculated, the amount of acidic material contained in the water may reach very high levels. This acid water will corrode metallic surfaces with which it comes in contact. In severe cases equipment has been known to fail after three months operation due to corrosive action of water used.

Ferro-Nil Service by maintaining water in a non-corrosive condition, prevents corrosion. Corrosion¹ causes high rates of depreciation. Ferro-Nil Service by maintaining metallic surfaces free from rust and scale affords optimum heat transfer efficiencies at all times.

We number among our clients, nationally known corporations such as:—

Rockefeller Center
National Broadcasting Company
Columbia Broadcasting Company
Runkel Chocolate Company
Metropolitan Life Insurance Company
U. S. Government

SUBSTANTIAL DOLLAR SAVINGS GUARANTEED

Let us submit estimate of cost of Ferro-Nil Service for your air conditioning equipment.

The illustration depicts a typical installation used on dehumidifier by the National Broadcasting Company. Note simplicity of design with consequent simplicity of installation and operation.
