JOINT
COMPOUND**

Kaiser Gypsum Pre-Mix Dual Purpose Joint Compound is recommended for use in gypsum dry wall construction to finish reinforcing walls and to finish and protect joints and fasteners.

DIRECTIONS FOR USE

This compound will give a smooth finish to the drywall surface. It is thinnest and is applied with clean, cool water only. Mix to wet sand for 5 gallons of compound. Knead before use. If any liquid has separated from compound in storage.

Recoat from cracking. There is a wait time for at least 24 hours before you allow compound to dry thoroughly between coats.

Maintain a minimum temperature of 55°F with adequate ventilation in the shop area during application and drying.

DECORATION

Allow compound to dry thoroughly before decorating.

1. For a skin finish textured paper, apply Kaiser Compound, allow to dry, and then apply an emulsion type sealer prior to painting.
2. For a sandy texture containing aggregate, for other full texture applications, for an accent finish, or for decoration with wallpaper, apply an emulsion type sealer and water wall surface, allow to dry and then apply texture.

The proper preparation should be followed as the following recommendation by the paint manufacturer that high paint will produce satisfactory results without the use of a primer.

IMPORTANT REMARKS: This compound is not to be used as a substitute for any other material. It is not to be used in any other application than that for which it is recommended. It is not to be used in any other application than that for which it is recommended. It is not to be used in any other application than that for which it is recommended.
