

Table 7.... Coefficients of Transmission (U) of Masonry Walls\*

Coefficients are expressed in Btu per (hour) (square foot) (Fahrenheit degree difference in temperature between the air on the two sides), and are based on an outside wind velocity of 15 mph

| Example—Wall G 1                                                  |                | Example of Substitution                                                                      |      |
|-------------------------------------------------------------------|----------------|----------------------------------------------------------------------------------------------|------|
| Resistances used are given below in this table or in Table 3 or 4 |                | Resistances used are given below in this table or in Table 3 or 4                            |      |
| Construction                                                      | Resistance (R) | Replace items 6 and 7 with wood panels (¾ in.) and vapor barrier applied over furring strips |      |
| 1. Outside surface (15 mph wind)                                  | 0.17           | Total resistance                                                                             | 3.83 |
| 2. Face brick (4 in.) (av. R.)                                    | 0.89           | Deduct 6. Gypsum lath (¾ in.)                                                                | 0.83 |
| 3. Cement mortar (¾ in.)                                          | 0.10           | 7. Plac. (sand agg.) (¾ in.)                                                                 | 0.09 |
| 4. Concrete block (cinder agg.) (4 in.)                           | 1.11           | Difference                                                                                   | 3.48 |
| 5. Air space                                                      | 0.97           | Add 6. Vapor barrier                                                                         | 0.06 |
| 6. Gypsum lath (¾ in.)                                            | 0.83           | 7. Wood panel (¾ in.)                                                                        | 0.84 |
| 7. Plac. (sand agg.) (¾ in.)                                      | 0.09           | Total resistance                                                                             | 4.48 |
| 8. Inside surface (still air)                                     | 0.68           | $U = 1/R = 1/4.48 =$                                                                         | 0.23 |
| Total resistance                                                  | 3.83           |                                                                                              |      |
| $U = 1/R = 1/3.83 =$                                              | 0.26           |                                                                                              |      |
| See value 0.26 in boldface type in table below.                   |                |                                                                                              |      |

To Adjust U Values for Construction with Added Insulation between Furring Strips, See Table 16
