Subject Asbestos Disposal At Goff Mountain

Jack,

As you know there has recently been a significant increase in insulation work at both the South Charleston and Institute Plants. As far as I know the current activity level is planned to continue for the next year or two. Most of the insulation being stripped contains asbestos, wherein lies my problem. Our ability to landfill safely the quantity of asbestos we are currently receiving, using our current landfill technique is of concern. Also of concern is the capacity issue. I know of several jobs currently planned at Institute that may be more than we can handle. As a result of these concerns I am doing the following;

1) I have asked for and received pricing information from alternative disposal sites. A copy of this information is attached, and
2) I have requested that our IH group perform asbestos monitoring at Goff.

Other than the two items above, no action is being taken at this time. However, there is a good chance that at least some of the asbestos containing insulation will have to be taken to another disposal site in the near future, particularly large jobs.

Jack, I will keep you informed as necessary and will give you as much lead time as possible if we should decide to cease taking asbestos at Goff.

Very truly yours,

Mark E. Tapp
