D. R. Tarne

*Burgin
6/10*

I call your attention to a recent report by George Gambino on "Victocor Body with Yieldable Fire Ring Design".

The report indicates that a fine job was done in correcting faults in specific numbers but I call your attention to the final paragraph of Gambino's letter which reads: "All the above corrective steps taken and the future steps planned will mean nothing if the Controls and Standards are not insisted upon."

What controls have we established to insure that these conditions no longer occur?

I cannot emphasize too strongly the importance of the Victocor 300 product line and the need for full and complete controls on all phases of manufacturing. We ought to be able to bring anyone of our customers involved, Caterpillar, John Deere, Waukesha, into our plant and lay open to them our records of controls, checks and procedures, just as is called for by Ford under Q101.
