

FLOOD STOP VALVE-604

- Stops Carburetor Flooding • Stops Vapor Locks • Stops Gas Odors •
- Saves on Engine Wear • Keeps New Car Zip Longer • Less Oil Dilution •
- Instant Starting • Improves Gas Mileage •

When you shut off the ignition, the fuel pump always unloads its gasoline under pressure into the carburetor, overloading it and pouring gas into the manifold and cylinders. BUT NOT WITH A FLOOD STOP – The gas is allowed to flow through a tube back to the gas tank instead!

SPECIAL NOTES:

- Some air conditioned and supercharged cars are equipped with FUEL PRESSURE RELIEF systems.
- Sometimes the original fuel pump is replaced by another having different tube and fitting sizes either after the car has been in service or by the MANUFACTURER during a model run. In this case the correct FLOOD STOP may be installed simply by checking the tube and fitting sizes on the car. For best results and whenever there is a doubt this should be done.
