A I am board certified in Anatomic Pathology and in Clinical Pathology.

Q When were you board certified in those two areas?

A May, 1975.

Q What did you have to do to become board certified?

A To become board certified, you have to complete a residency program in the training of, or specialization in, medicine that you are interested in that is approved by a specialty board.

In my case, it was the residency program at the University of Washington, approved by the American Board of Pathologists, which is a group of pathologists who are responsible for making sure that pathology training is done correctly.

Once you complete your residency, you are then eligible to take an examination in pathology, and I took mine in May of 1975 and it was in San Diego, California.

It was a three-day examination, and if you
