and Armstrong Cork Company. Perodo Limited is producing non-slip stairtreads, which are extensively used by the building industry.

INSULATING MATERIALS

Sprayed Asbestos

The technique of spraying asbestos to produce coatings for heat and sound insulation, fire protection and the prevention of condensation was created in Britain in 1931 by J. W. Roberts Limited, who secured world-wide patents for their Sprayed Limpet Asbestos process. It has been continuously developed and improved with the result that it is now known throughout the world. The asbestos fibre and cement mixture is applied as an airborne stream with jets of atomized water, the resulting coating being then lightly pressed back with a float to the required thickness and density. It thereby provides coatings which are in intimate and continuous contact with the surface being treated, following all contours regardless of complexity and thus being extremely versatile.

Recent examples of Sprayed Limpet Asbestos applications include the New York State, the General Electric Company in U.S.A. and the General Motors Futurama buildings at the New York World's Fair and the fireproofing of the 52-story Prudential Centre tower in Boston, Massachusetts. It was also applied for insulation and sound deadening to the ceiling of the Olympic Judo Stadium, Tokyo. Additions within the last year to the many luxury liners insulated and fire protected by this process include the Italian ships, "Michelangelo" and "Raffaello", the Home Lines "Oceanic" and the currently building Swedish-America liner "Kungsholm". New applications continue to be developed, a recent instance being in mining.

The capillarity of asbestos fibres has been put to work with excellent results to control condensation in buildings such as swimming pools and on the steel shells of railway cars⁽²⁾. The roofs and sides of such structures are chilled by outside atmospheres and by radiation to clear skies. Their temperature is thus frequently lowered below the

Australian Blue Asbestos Pty. Limited

Australian Blue is an ideal fibre for asbestos cement and for purposes requiring good heat insulation and acid resistance. It has excellent spinning properties. Samples available on request.
