Amosite Asbestos is in extremely short supply. Production is down at the Mine, and North American Asbestos appear to be "robbing Peter to pay Paul". Unless there's improvement, by the end of June we could be dipping into our reserve stock.

In February I passed over a sample of Amosite from Huxley Development Corporation - this is a New York broker who represents another, smaller Cape producer. At that time, Huxley advised that they hoped to be able to have some of this material available, even though the bulk of their production is committed to their own customers.

I phoned Huxley this morning, and they are cabling the Mines to check on current availability. In the meantime, I suggest you do everything possible to expedite approval of their Grade CF Asbestos, a sample of which was passed over on M-4947.
