Subject: Emission Rates

Debbie,

The first pass at revised rates follows:

Area	Vent ID	Rate lb/yr
FPD	647	13977
FEP	231	3200
FEP	232	3200
FEP	242	1430
PFA	274	9790

lb/yr
1.27 x 4200
0.27 → 1250 } 2002 RATE
0.27 → 1258
0.16 → 1650
1.12 lb/yr → 1500

This was based on a "crude" redistribution of material missing from the material balance to the FEP & PFA vents allocated by the relative amounts that are potential emissions for those vents. Karl told me that Roger will be revising this distribution based on a more detailed study of the scrubber operating records.
