foreword

THIS BOOKLET has been prepared to inform the staff of the policies, products, facilities and the history of The Sherwin-Williams Co.

1 Mr. Slepoin, the author, has here recorded facts gleaned from his experience of over 50 years of active service at Headquarters and in charge of plants at Montreal, Chicago and our associate, the Lewis Berger and
2 Sons, Ltd., of London, England. He knew and personally worked with Mr. Sherwin, Mr. Williams and Mr. Fenn and others who followed them in guiding the business. He has seen the Company grow from one small paint factory in Cleveland, and another in Chicago, to the present far-flung organization.

Insert the following at

3 Since the 50th Anniversary Convention in 1916, he has had charge of the Historical Collection at Headquarters and has been collecting data about the Company and its products. This Historical Collection is open to all members of the staff and visitors at all times and is well worth a visit.

The products, history, and development of The Sherwin-Williams Co. covers such a broad field that this booklet serves only as a comprehensive reference index of the Company's activities. Experts on all subjects have been fully consulted in compiling it.

This booklet will enable the staff to talk in a well-informed way about the Company and its products. Such person-to-person first hand direct answer to questions is the best possible way of representing the Company and winning friends for it. Accurate information is the basis of good public relations.

We commend this booklet to the careful reading and close study of all members of the staff and suggest that it be kept as a book of reference.

4 { For further and detailed information on any subject, the reader is referred to the individual departments.

2.

As the Company's manufacturing facilities have expanded, a wide variety of chemical products have been added. No longer known only as a paint house, The Sherwin-Williams Co. is now also an important chemical company. This expansion has required greatly extended distributive channels to handle the new products, such as waxes, polishes, cleaners, insect killers and weed killers. Many grocery and drug stores now are included among S-W dealers.

1. Omit all dealers marked with X. Include rest on previous page with that list.

Cover-the-Earth Design

Large scale selling to consumers is promoted by good advertising. It has always been a policy of The Sherwin-Williams Co. to make its products well known to the public.

In the early days the Company's trade mark was a chameleon, the small lizard having the power to change color at will.

The "Cover-the-Earth" was devised in 1895 by G. W. Ford, (at that time advertising manager) and officially adopted as the Company trade mark in 1905. Its first use was as an enclosing slip with outgoing mail. It was also used for roadway signs to advertise the dealers handling Sherwin-Williams Products in nearby towns. This met with so much favor that it became very generally used and in 1905 was definitely established as the Company's trade mark superseding the chameleon.

OMIT ENTIRE PAGE

THE STORY OF SHERWIN-WILLIAMS PRODUCTS

HE Sherwin-Williams Co. has been a very strong influence in the development of the Paint, Varnish and Lacquer Industry. In 1866 when Mr. Sherwin entered the business in Cleveland, prepared paint was practically unknown. Almost all painting was done by practical painters who prepared the paint specially for the job.

About the only material available was white lead, linseed oil, drier, varnish and dry color pigments.

The demand for paint finishes was beginning to greatly exceed the ability of painters to mix and apply the paint. Recognizing this, Mr. Sherwin early entered into the manufacture of paint with the idea of making a product so prepared that the painter or the consumer could use it as supplied, thus eliminating the need of preparing material specially for the job.

It is obvious that a well-organized manufacturer, with skilled chemists and paint engineers having a knowledge of ingredients and with efficient manufacturing facilities, could make a better paint than the individual painter could do by hand mixing.

One of the greatest contributions Sherwin-Williams has made to the Industry is the fundamental principle of offering to the public only the highest quality product designed specially for each individual requirement. Thus the Company has set a high standard for the Industry much to the benefit of the public.

The quality of paint, varnish and lacquer is not revealed by a superficial examination of the product itself. It is not until

OMIT ENTIRE PAGE

the material has been applied and subjected to exposure for a considerable time that the real quality can be determined. Hence it is very important for the user to know that the manufacturer can be absolutely depended upon. The Sherwin-Williams Co. has from the very first so definitely applied the policy of supplying only products of the highest quality that Sherwin-Williams Products are generally accepted as the standard of the Industry.

The earliest manufacture recorded was Guaranteed Strictly Pure Colors in Oil in 1873. The individual items of this line were made, using only the pure coloring pigment ground in linseed oil. These colors were much superior to others commonly offered.

At this time a demand was developing for prepared paints and in 1880 the Company put on the market SWP-Sherwin-Williams Paint Prepared. It was the first high-grade prepared house paint and was very much better in quality than any other paint offered to the public at that time.

The Company had a very hard uphill fight to get recognition, however, they followed the firm policy of making only the highest grade material. In time this high-quality was recognized and SWP was accepted as a standard for the best quality of exterior house paints. Through constant improvements, SWP has continued to hold this leading position in the industry.

The first SWP exterior house paint was also recommended for floors with the qualification the user must allow several days for drying and then must wash the floor several times with cold water, after which the paint would be thoroughly dried and would wear like iron. Later, in 1884, realizing the

OMIT ENTIRE PAGE

public could not suffer such inconvenience a new product was offered—Special Floor Paint "Dries overnight." This is now the line of Porch & Floor Enamel much improved in quality, as the science of paint making has developed new materials and methods of manufacture.

The next outstanding product the Company offered was a flat wall paint, giving to the public something far superior to kalsomine or other hand-mixed paints. This was in 1898, the product was called Special Interior Colors, later developing into Flat-Tone. To satisfy the demand for more gloss Semi-Lustre was brought out in 1925.

Another interior finish, Kem-Tone, was put on the market in 1941, supplying a paint which used a minimum of raw materials, which had become critically scarce through heavy war demand. Kem-Tone has had an unparalleled success and supplies a very large proportion of the country's demand for a paint of this character.

Up to the turn of the century it was not considered within the province of a paint manufacturer to also produce varnish. The Sherwin-Williams Co. was looked upon as a manufacturer of house paint; however, the Company had for many years been making special driers and treated oil required in paint products, so in 1898, it was decided to market a complete line of high-grade varnishes.

Coincident with this development of products for household and general use, many special products were developed for use by industrial consumers and for railway and marine requirements.

OMIT ENTIRE PAGE

Feeling that the quality of Sherwin-Williams finished products depended greatly upon the reliable quality of the primary raw materials a comprehensive plan to produce such raw materials was undertaken in 1898 with the manufacture of dry colors at Cleveland. This was followed in 1902 by the manufacture of linseed oil at Cleveland and a smelter for the manufacture of leaded zinc at Coffeyville, Kansas, in 1904. A white lead mill was erected in Chicago in 1910.

At the beginning of World War I, in 1914, the manufacture of dyes and intermediates was undertaken at Chicago as it was no longer possible to procure such chemicals from Germany. This Chemical Products Department has been greatly developed and now produces a substantial proportion of the United States consumption of many intermediate chemicals used in the manufacture of dry colors, drugs, synthetic rubber, explosives, lubricating oils, fur dyes and many other items.

Following shortly after the close of World War I the automobile manufacturers demanded a finish which would dry much faster than the oleoresinous varnish enamels then being used. Accordingly, nitrocellulose lacquers were developed. Sherwin-Williams contributing greatly to this need, put Opex Lacquer on the market in 1922.

The fast-drying quality of lacquer caused a demand for a speeding up in the drying of varnish and enamel which resulted in the marketing of what was then called "4-Hour Enamel." An entirely new type of varnish and synthetic resin was developed for this purpose. Sherwin-Williams entered this new field with a pilot plant in Cleveland in 1926 and producing units were established in Cleveland and Chicago shortly

OMIT ENTIRE PAGE

afterwards. A full line of such varnishes are now produced in almost all of the plants. They are far superior to the old varnishes made of natural resins and oils. These new varnishes are much more reliable as the primary raw materials used are all under definite chemical control. These varnishes were the basis of the development for many varieties of Kem Enamels which dry much faster, are much more simple to use and are better in every respect than former oleoresinous varnish enamels.

The manufacture of insecticides was undertaken in 1903 as quite a natural extension of the dry color production. This field has been developed until the Company is now the largest manufacturer of commercial insecticides. A considerable number of individual products now in common use originated in the S-W laboratories. These include Dry Lime Sulphur, Basic Copper Sulphate and a number of other specialty products. The Sherwin-Williams Co. now produces a very large volume of popular household insecticides and weed killers, such as Pestroy DDT, Bug Blasters and Weed-No-More 2,4-D.

During World War II. military needs required so much paint that it was quite impossible to produce enough paints and varnishes for civilian requirements. Every effort was made to produce items using a minimum of critical raw materials. Kem-Tone and the Lin-X line were put on the market.

A number of new products and improvements in formulas are under investigation and being thoroughly tested. As soon as they are fully developed they will be offered for sale.

SHERWIN-WILLIAMS PRODUCTS COVER THE EARTH

The protective paint on the outside of your house, the interior decoration of walls and furniture, the enameled design on your tube of toothpaste, the color on your print dress or other printed fabrics, the print ink on the Sunday comic papers are all products of the paint industry and probably manufactured in one of the Sherwin-Williams plants.

The Company produced paint, colors, varnishes, lacquers of every description for houses, buildings, bridges, railways, ships, automobiles, aircraft and a wide variety of manufactured products. Bridges would soon become unsafe; automobiles and trucks would rust away; houses and buildings would rapidly fall into decay were it not for the protective coat of paint. Certain industries such as chemical manufacturing and petroleum refining require special finishes which will resist the destructive action of heat, moisture, fumes, solvents, and acids and S-W Products have been supplied to meet these requirements.

It is estimated that on such structures and equipment exposed to the weather are protected by paint at an annual cost of about 1/4 of 1% of their value.

Paint, moreover, being color, has a very personal effect on all of us. We use it extensively to beautify our homes and take pride in selecting color schemes that make our homes pleasant, cheerful places to live in. Psychologists understand the effect of color on people. They tell us that certain colors make us feel warm, others make us feel cool. They even know that the color scheme in an airplane definitely affects the possibilities of air-sickness!

Industrial engineers have also studied the effect of color on individuals. They have found that re-painting a factory according to certain color schemes will eliminate eye-fatigue, reduce accidents, and boost the morale of employees. They advise specific color schemes for heavy industry, other schemes for light industry. They tell us that a good color scheme in one geographic section of the country may be a poor one for another section. Paint in brief is an important part in making the world a happier place in which to live and work.

Sherwin-Williams makes finishes to beautify and protect the surfaces of most of the things with which we come in contact in the course of our everyday living. Furniture, radios, television sets, refrigerators, kitchen cabinets, farm implements, office equipment, toys, electric appliances, collapsible metal tubes, metal and paper containers — including the cans in which paint itself is marketed — may all be finished with Sherwin-Williams products. ~~Sherwin-Williams makes~~ paints, enamels, lacquers, and varnishes are made for application by brushing, spraying, dipping, or roller-coating. These finishes may be of either air-drying or baking types.

To understand how Sherwin-Williams has come to play such an important part in the economy of the entire country and to affect the day-to-day living and working of Americans requires that one should know something about paint.

Paint is a coating or film used to protect and decorate. Basically, it consists of pigments, vehicles and reducers. Pigment, or solid coloring matter, is the ingredient which differentiates an opaque material like paint from a transparent coating. The vehicle binds the particles of pigment together into a uniformly colored composition and adheres to the surface, while a reducer thins the paint to a consistency suitable for applying.

To make certain that the quality of raw materials is the highest possible, Sherwin-Williams has over a period of years expanded operations from the production of paints to embrace also the production of the most important paint ingredients. This includes production of leaded zinc, lithopone, dry colors, chemical products, linseed and other oils, and synthetic resins.

Sherwin-Williams manufactures its own paint cans, and from the very beginning has operated its own printing plant for the production of labels and color cards.

Despite Sherwin-Williams' broad scope and great variety of products, paint, varnish and lacquer are the most important. In fact, most of the non-paint products were developed ~~either~~ because they are used in certain paints or because their manufacturing process is similar to one of the many chemicals that go into paint. The techniques and equipment required to produce these and other chemicals enable the Sherwin-Williams Co. to manufacture essential ingredients for drugs, ~~insecticides and weed-killers~~.

The very food you eat is becoming more and more dependant upon Sherwin-Williams products. The Company's DDT insecticide, Pestroy, rid~~s~~ livestock, poultry and grains of parasitic, food-destroying insects and diseases. Sherwin-Williams' Pestroy has proven particularly valuable to farmers. Dairy cows, freed from the annoyance of flies, have shown increased milk production of as much as 20%. Beef cattle protected with DDT have put on 50 to 60 pounds of extra weight in the course of a season. And its 2,4-D chemical weed-killer, Weed-No-More, easily and economically destroys noxious weeds that otherwise would choke out the life of corn, wheat, rice and other food crops, and improves the grazing capacity of our pasture lands. ~~Leading food experts estimated recently that over \$500,000,000 worth of food could be saved in one year if agricultural chemicals were widely and properly used.~~

omit

(9.)

SHERWIN-WILLIAMS PRODUCTS
DESCRIPTION — DATE OF FIRST MANUFACTURE

EVERY individual Sherwin-Williams Product has been developed to be the highest grade material for the purpose intended. Independent market surveys show that S-W products enjoy a consumer preference of four to one over the next leading brand.

To insure dependability and uniformity, endless laboratory and field research is being devoted to the formulas and control of manufacture. The high standard of S-W formulas is attained largely by the fact that the most important primary raw materials are made in the Company's own factories under the direct supervision of a large corps of chemists. All products are under constant investigation and improved as new and better raw materials or manufacturing processes become available.

1. During the difficult war period through which we recently passed, there was no deviation from the firm policy to maintain standard quality. If circumstances made it impossible to procure raw materials for manufacturing this high quality, the Company refrained from producing rather than to sacrifice the quality of the product. *out*

2. Products have been designed for every variety of requirement. A product is developed for each individual household and industrial need—obviously, a paint best suited for interior decoration is usually not suitable for exterior exposure. Over 50 distinct lines of products are offered for the convenience of the householder. Each one is designed to produce the most satisfactory results for the intended use. *21ct*

3. ~~Include copy about SWP now found on next page, at the bottom of this page.~~
3. Add the following paragraph:

To insure that all products comply with standard quality, careful and thorough tests are made before filling into packages. Tests are constantly made of products sent in from branch stocks to insure package stability. Should any defect develop, the entire stock out in the field and in warehouses is immediately recalled.

THE FOLLOWING ARE SOME OF THE IMPORTANT PRODUCTS:

SWP—Sherwin-Williams Paint

First made in 1880 as the highest standard of prepared exterior house paint. It lead the Industry away from the cheap "ready-mixed paints" which were then offered to an unsuspecting public. Paint of this type is now specified by the U. S. Government and many large consumers as the best paint for exterior wood surfaces.

"SWP is to Paint What Sterling is to Silver"

The present formula embodies the most up-to-date improvements known to modern paint-making science. Extensive laboratory and field tests prove its superiority and dependability in every respect.

An undercoater is supplied, designed to prepare new or weather beaten wood or previously painted surfaces, suitably for the finishing coat.

The SWP line includes a full range of clean, durable colors. It dries with a firm elastic coat that resists dirt, is practically self-cleaning. It provides long wearing protection leaving an excellent surface for repainting.

Kem-Tone—1941
MIRACLE WALL FINISH

Flat, durable washable, interior finish suitable for painting over wallpaper, plaster, wallboard, brick, cement, painted or unpainted. Dries in one hour with no "painty" odor. A synthetic resin and oil finish supplied as semi-paste to be reduced with water to painting consistency.

It revolutionized the painting of Cement

OMIT ENTIRE PAGE

Among these special products some of the most important are:

Metal Protective Finishes

Designed to withstand weather and atmospheric fumes which cause the corrosion that weakens or even destroys bridges and other steel structures.

Kromik Metal Primer

Provides a chemically inactive condition at the surface of the metal and offers an ideal foundation for the finishing coat.

Metolastic—Kern-Elastic

As a finishing coat, will withstand exposure and insure maximum protection for a long period. Supplied in seven colors—Black, Red, Brown, Light and Medium Gray, Light Green and Aluminum.

Save-Lite Mill White Finishes

Are designed for the better illumination of commercial buildings, schools, offices, stores and factories. Savelite retains its intensive white finish for a long period of service. It is supplied in full gloss, flat and eggshell finishes. Special formulas are supplied for special conditions in hospitals, chemical factories, packing houses, food processing plants, dairies, distilleries, breweries—where sanitary conditions are particularly important and where the paint must resist extremes of moisture, heat, fumes or the formation of mold.

Color Harmony Satin Finish

A beautiful low lustre finish for walls of factories, offices, schools, hotels, and hospitals. Combines the appearance of a flat finish with the durability and washability of a semi-gloss.

SHERWIN-WILLIAMS MARINE FINISHES

add letter T

insert at ^ have been developed.

THROUGH long experience in the manufacture of Marine Paints and the supply of enormous quantities for Navy use during World War I and World War II, The Sherwin-Williams Co. has developed a line of Marine Paints of the highest quality affording the maximum protection. The S.S. America pictured above was refinished throughout with S-W products when it was reconditioned for passenger travel after service as a troop ship.

omit part of sentence as indicated, adding also

omit last sentence in paragraph

S-W Marine Finishes all are carefully formulated so as not to be affected unduly by the frequently unfavorable conditions of cold or moisture under which much marine painting is done. They are designed to withstand exposure and severe weather conditions. Special products are supplied for use of the ship builder and for the maintenance of ships in service in salt and fresh water.

omit this paragraph entirely

(24)

S-W Marine Finishes suitable for passenger, freight, naval vessels and pleasure craft are supplied. These are available at many ports of call on the Atlantic and Pacific sea coasts and on the Great Lakes. The most important items are:

Marine Primers providing the best rust-inhibitive protection under the finishing coats.

Hull Paints producing tough, durable, water repellent surfaces on steel or wood hulls in either salt or fresh water.

Bottom Paints—Affording the best protection against rust and resisting the accumulation of barnacles, worms and other marine growths.

Superstructure Finishes—A full range of colors of quick-drying, durable finishes not affected by salt spray.

Deck Finishes—Tough, quick-drying, waterproof and durable finishes that will withstand traffic and frequent washing.

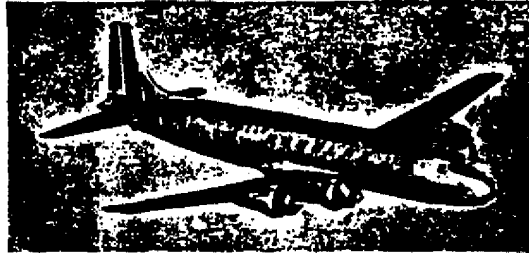

Cargo Hold Finishes—Tough, elastic, waterproof coatings insuring best resistance to corrosion.

Interior Cabin Finishes—Attractive tints of Semi-Gloss Enamel are supplied that will dry with a satin finish able to withstand repeated washings.

Engine Enamels—Tough, durable synthetic enamels drying to semi-gloss finish, resistant to heat, grease and gasoline.

Marine Varnishes—Gloss and satin finish, designed for long wear on interior and exterior surfaces. Retain gloss and wear well exposed to the weather.

AUXILIARY PRODUCTS

BEGINNING about 50 years ago and even earlier, the Company started on the plan to manufacture important primary raw materials for use in paints, varnishes, lacquers, dry colors and other products. With the production of such raw material under full control, it is possible to regulate the quality of finished products to comply fully with the high standard set for all Sherwin-Williams Products. The following items are some of the most important:

omit and add words
as indicated in this
paragraph

White Lead—1910

Basic Carbonate White Lead — one of the most important white pigments used in paint. ~~It is the earliest pigment so used in the Paint Industry and for many years was the only one.~~ ADD

HERE: Our manufacture of
white lead has now been
discontinued.

~~White Lead is opaque and dense, and is used in almost all white and tinted exterior house paints. In some cases as the only white pigment. However, many scientific tests and much practical experience has proven that much more satisfactory house paint is produced by a combination of White Lead, Zinc Oxide and Titanium Oxide.~~

OMIT THIS PARAGRAPH

The Company first started manufacture of White Lead in Chicago in 1910, using the Old Dutch Process. In 1921 a Quick-Process Plant was established later.

OMIT THIS PARAGRAPH

Ozark Leaded Zinc Oxide—1904

ADD THIS WORD

First made by the Company in 1904 in the Ozark Smelting and Mining Company plant at Coffeyville, Kansas. Leaded zinc oxide is fumed from zinc ores containing a proportion of lead ~~and~~.

add word

combine with page 20

phide. The resulting pigment—a compound of zinc oxide and lead sulphate—is very well adapted for exterior house paints. The Coffeyville Plant supplies the requirements of all Sherwin-Williams and Subsidiary Companies and sells a large volume to other consumers.

omit sentence indicated

Lithopone—1917

A chemical compound white pigment containing zinc sulphide and barium sulphate. It is the chief pigment in interior flat wall paint. The Company's first manufacture was in Chicago in 1917. Increasing demand and other advantages caused the production to be transferred to a much larger plant at Coffeyville in 1921. All the Subsidiary Companies, as well as other consumers, are supplied from this plant.

~~Phthalic Anhydride—Rapidly becoming a major component in the manufacture of varnishes.~~

Synthetic Resins—1929

The Company's research in Synthetic Resins was begun in Cleveland in 1928. Actual manufacture was first undertaken in Cleveland in a pilot plant in 1929. Research was transferred to Chicago in 1936 and production of synthetic varnishes is now carried on in practically all paint and varnish plants.

OMIT ENTIRE :
PARAGRAPH

Prior to the use of Synthetic Resins, varnishes were made from natural resin/cooked with a drying oil and reduced with turpentine or other thinner. Due to the lack of uniformity of natural material, many difficulties were encountered and raw material supplies were definitely limited.

A very wide variety of Synthetic Resins, marvelous chemical compounds, have now been developed to produce varnishes far surpassing the former oleoresinous type in quality, adaptability and durability. Such Synthetic Resins lend themselves to mass production of varnishes that have performance characteristics undreamed of formerly. These Synthetic Varnishes have kept up with the rapidly advancing pace of the Industry.

The use of the name KEM on many products is a direct evolution of the Company's development of synthetic resins. It designates chemically evolved material.

Linseed Oil—1902

To provide the large volume of this important oil used in S-W products, a plant was established in Cleveland in 1902. The oil is crushed from flax seed ~~in hydraulic presses and~~ ^{recently been installed.} A ~~new~~ plant using a solvent to extract oil from flax seed, soya, castor or other beans and seeds, has ~~been~~ ^{recently been} installed. ~~Some linseed oil in the raw state is treated and refined to suit~~ ^{MIT THE} a variety of requirements.

Dehydrated Castor Oil—1939

The difficulties encountered in procuring Tung Nut Oil from China because of Chinese-Japanese war troubles caused American varnish manufacturers to develop a substitute. It was found that Castor Oil could be treated resulting in an oil which in some respects is superior to Tung Oil.

The Sherwin-Williams Co. contributed much to this development and since 1939 a very efficient plant has been operating in Cleveland.

Sulphate Wood Turpentine—1936

To supply turpentine to the Company's many branches for sale to painters and to the factories for use in S-W products, the production of turpentine was undertaken in 1936 in Chicago. Crude wood sulphate turpentine resulting from paper-making processes is carefully refined into a very high quality of solvent.

1936

Tin Cans—1874

The manufacture of tin cans was started in a small plant at Cleveland in 1874. Realizing the consumers desire to reclose a can to protect the contents for future use, a patent was obtained on a special design in 1877. The Tin Can Department grew rapidly and in 1921 the manufacture was transferred to Chicago to a greatly expanded up-to-date plant of great capacity. Shortage of tin plate during World War II. brought about the manufacture of very satisfactory cans with a fibre body. A plant is now being established for the manufacture of lithographed cans. Annual capacity of the department now 125,000,000 cans. Today daily capacity of the plant in Chicago is over 500,000 plain and lithographed packages

RESEARCH, DEVELOPMENT AND CONTROL

About ~~two~~³ hundred and fifty trained chemists and an almost equal number of trained laboratory and field technicians are constantly employed in the testing of raw materials, controlling manufacturing processes, the performance of all formulas and the development of new products. All factory operations are under strict control by experts to insure that finished products comply fully with Sherwin-Williams standards.

This work results in many new products and better methods, thus maintaining the leading position Sherwin-Williams Products occupy. Each product is designed to be the highest quality for the use intended and is offered to give the consumer the very best value and satisfaction for the individual requirement.

Special laboratories are devoting research to paint, varnish, synthetic resins, oils, dry colors and chemical products.

* *
The laboratories are constantly experimenting with new raw materials as they appear on the market. New equipment and manufacturing processes are thoroughly investigated. Extensive exposure tests of finished products are carried on in the field at testing stations in Florida and at other points.

New requirements are constantly revealed by sales representatives and such problems are immediately referred to the laboratories for solution.

* Fellowships and scholarships are maintained in several colleges.

Page 23

ADVERTISING

From the beginning of the Company every effort has been made to present S-W Products to the public with comprehensive, truthful advertising. Each product is illustrated with attractive display signs, color cards, and literature describing its use.

Roadway signs, newspaper, magazines, moving pictures, and radio are used to the fullest extent to keep the S-W name before the public.

An outstanding feature is the Paint and Color Style Guide.

First issued in 1940.

The Style Guide embodies a method entirely new in the industry showing Kodachrome

First Color Card
1873

pictures of finished painted exteriors or interiors of homes.

These pictures give the home owner a much better comprehension of the results to be obtained than is possible from a small color chip. Up to 1952 there have been four issues of the Style Guide including 225,000 copies. Also, there have been three issues of the Style Guide Companion starting in 1950, a total of 55,000 copies.

RECREATIONAL ACTIVITIES

SHERWIN-WILLIAMS has always given encouragement to those recreational activities that develop spontaneously as employees extend associations into leisure time.

It is a point of pride with the Company that although it has grown into a large national concern that its interest in employee activities has not drifted into passive policy. It is recognized that the people who belong to the organization contribute something in the aggregate to the life and success of the business. The sense of team work, which is as vital and necessary as making good products and selling them at fair prices, develops best when employees know each other as friends and companions.

In sympathetic environment, therefore, the activities employees undertake with company sponsorship are very comprehensive. Many executives who have come to top management responsibilities owe their success at least in part to these leisure time pursuits. These activities have made it possible for young men to have the benefit of learning by association with leaders in recreation as well as on the job. Individual advancement through study of business problems is a regular program for young executives.

Clubs abound in the Company and at every point of employment there is some choice of leisure time programs. A partial list of Sherwin-Williams Clubs given below is included to show the national scope and the diversity of interests.

PRINTING AND SAMPLING DEPARTMENT

From the very beginning of the business it was felt that printing and the making of sample cards and literature could be most satisfactorily controlled in a Company-owned plant.

Beginning in a small way in a little room 10 x 12 feet, Bob Joiner was compositor and pressman assisted by Tom Sykes, printer's devil. They had three or four small fonts of type and a rickety foot power press. Before very long two Gordon presses were bought and by 1876 it took six men and a boy to handle the work.

And so the department grew rapidly. Much of the early literature issued was very creditable and surpassed that of competitors in the industry.

In 1951 the whole printing and sampling department was moved to much larger quarters in North Olmsted. This plant occupies 70,000 feet of floor space; 18 modern high-speed presses, supplemented by cutting machines and other equipment. The printing of sample sheets is done by roller-coating and spraying to the extent of approximately 400,000,000 color chips for 16,000,000 color cards per year. Approaching 100,000,000 labels are produced each year. All this work is handled by a staff of approximately 250 people.

PEOPLE MAKE PAINT - The biggest single factor in the growth of a company is not its plants, warehouses, or laboratories. It is, and always will be, its men and women. Sherwin-Williams' reputation for quality and service, as well as its pre-eminent position in the paint industry, is the result of over 86 years of tireless effort expended by our employees.

In a company as large as Sherwin-Williams, it may be difficult to visualize readily why your job is especially important and how it is related to the thousands of other jobs in the company; but it is the combined efforts of thousands of employees responsible for research, manufacturing, warehousing, and selling of our products—for the thousands of related activities that make possible a smooth-working, successful operation.

Genuine pride in a job—in products they helped make—in their company—and the things their company stood for, developed an enthusiasm or spirit which made Sherwin-Williams what it is today. Progress and success of a company is founded on this spirit in the hearts of men and women. It makes not only the company successful, but, more important, it offers opportunity and success to individual employees.

Just because Sherwin-Williams is big doesn't mean that an employee will get lost in it. Fortunately, most factory, office, and sales units are small enough so that you and your job are given careful individual attention and consideration.

PUBLIC RESPONSIBILITY - You, as an employee, have probably already found that to your friends and neighbors you are Sherwin-Williams. Whether you are a factory worker, a supervisor, a junior office clerk, a department head, a sales representative or a manager, your job is important and your duties are a vital part of the organization.

Paint consumers are always seeking advice and helpful suggestions. If you are not sure you know the answer to an inquiry, don't hesitate to say, "I don't know, but I will find out and let you know". For answers to such questions consult your supervisor or refer the individual to the nearest Sherwin-Williams' dealer or branch.

Creating and maintaining customer-goodwill is a responsibility none of us can evade—on or off the job. There is a lot of personal satisfaction in the fact that people we know regard each of us as a source of all information regarding Sherwin-Williams and all Sherwin-Williams' products. After all, the final object is a satisfied consumer. If the consumer is not satisfied we cannot have a happy, contented family of employees.

OPPORTUNITY - Sherwin-Williams is growing and branching out into new fields. This, plus the constant flow of personnel changes, advancements, and retirements opens new opportunities for those willing and competent to take advantage of them.

We believe in progressive advancement of capable employees who look upon Sherwin-Williams as a career. There are, in the organization, many younger men of great promise who are carrying the brunt of the active work. Throughout the entire Sherwin-Williams Co. and Affiliated Companies—there are over 1,000 managerial and supervisory positions. Vacancies frequently arise and new positions are being constantly created. These openings are usually filled by promoting younger members of the staff to these broader opportunities. Most of the officials have risen from the ranks to their present high positions in this way. Only rarely does an outsider join the organization in one of the higher

positions. This is when some special skill or knowledge is required beyond that possessed by some available member of the staff. There is every opportunity for any deserving young person of average intelligence to rise to a high position in the organization by application and study encouraged by devotion to duty. To those who are industrious and have ability the Company offers opportunity and advancement.

By fulfilling the requirements and obligations of your present position, you show ~~interest~~ that you probably have what it takes for a better job. The employee who advances in the organization is usually the employee who not only does his own assignment well, but has taken an active interest in the work of others in the rest of his department and in the Company as a whole.

SECURITY - "A Company is Known by the Men it Keeps." An important value placed on any job is the security it offers. Every job has some risk and ~~lack of security~~, but the jobs valued highest are with those companies who through the years have proven that their jobs have security—continuous employment in good times and bad.

Continuous employment, however, is closely linked with the rise and fall in business volume. If business fluctuates materially there must necessarily be some fluctuation in the number of employees.

The Sherwin-Williams Co., and the Affiliated Companies, have now over 14,000 employees. Since the beginning and up to December 31, 1952, 1,752 men and women have served for 25 years. 1,435 of these are still active in the business. 57 have served for 50 years — of whom 10 are still active. 63

*Perini
1952*

15,500

2,377 (38)

This long service record is tangible evidence of the cordial relations ~~existing~~ existing between the Company and the employees since the beginning. On reaching 25 years of service with the Company each employee received a fine gold watch and a long-service certificate as a token of the Company's appreciation. Practically all of the officers and men in highest positions have worked up from the bottom and thus, the business is guided by long experience.

COMPENSATION - Sherwin-Williams pays wages and salaries that are in line with comparable types of work in other companies of the same type, where you might work if you were not with Sherwin-Williams. This is good business because it insures that we will continue to attract high-grade employees.

The amount of your pay check, as you know, is not the full amount of your pay. Part of your earnings have been deducted and set aside on your behalf. These deductions are made either by Government requirement or at your request for specific purposes.

Additional compensation you receive is in the form of the many benefits paid for by Sherwin-Williams. The Company makes substantial payments over and above your pay check to maintain these benefit plans for you. A general description of these plans follows:

LIFE INSURANCE - All employees after three months' service with Sherwin-Williams are covered by a Group Life Insurance Policy in the amount of \$1,500. The cost of this plan is borne entirely by Sherwin-Williams. ~~This policy also pays~~ Here, insurance may be purchased by employees at very low rates. ~~This program has~~ been explained more fully in a separate booklet.

RETIREMENT PLAN - This plan provides for normal retirement at age 65 or earlier under certain conditions. Benefits are payable for life. This plan supplements the Federal Social Security program. The cost is borne entirely by The Sherwin-Williams Co., all employees being covered without contribution. A separate booklet is available explaining the plan in detail.

HOSPITALIZATION AND MEDICAL SERVICE - Where employee groups are large enough and sufficiently interested, Sherwin-Williams has made available through payroll deduction Group Hospital and Medical Service.

HEALTH AND SAFETY - Sherwin-Williams over the years has constantly improved working conditions in an effort to reduce health and safety hazards. Every job in Sherwin-Williams is safe-guarded in every reasonable way, but your personal care and effort is necessary to prevent mishaps and possible accidents.

CAFETERIAS - Where size of employee groups permits cafeteria facilities are maintained. These are subsidized by the Company and provide good wholesome food economically.

EMPLOYEE PURCHASES - Employees may purchase for their own use any Sherwin-Williams products and sundry items sold by Company branches, at prices substantially below retail.

CREDIT UNIONS - Under the control of Federal or State Laws, many units of Sherwin-Williams' employees belong to credit unions. These are actually banks, providing a safe organization in which to save money and a convenient source for loans.

Combine this page with preceding ones

VACATIONS - Sherwin-Williams years ago set up a vacation plan insisting that employees take vacation time off with pay. After one year's service an employee is eligible for one week vacation with pay. This increases with additional service to three weeks' vacation with pay.

EMPLOYEES' ACTIVITIES - Sherwin-Williams is very glad to assist in athletic or social activities promoting employee health and recreation and a spirit of good sportsmanship.

DISABILITY BENEFIT PLANS - For regular permanent full time factory employees and the hourly payroll, a method is in force to compensate employees with liberal benefits during illness.

THE STORY OF THE MEN OF SHERWIN-WILLIAMS

This fascinating story should inspire those coming into the organization that here is a company founded and carried forward by men who began early and made full use of the opportunities for service and recognition offered.

Correct as indicated

add letter T

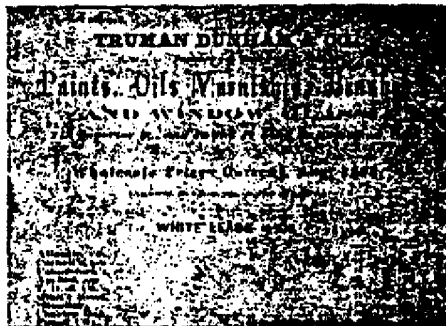

THE Sherwin-Williams Co. was started in 1866 when Henry A. Sherwin, then a young man 24 years old, joined Truman Dunham and G. O. Griswold in partnership under the name of Truman Dunham & Company. They sold white lead, linseed oil, turpentine, varnishes, colors, glass, brushes and painters' supplies. (Glass was bought from Day Williams & Co. of Kent, Ohio). In 1869 Mr. A. T. Osborn was admitted into the partnership.

insert at : invested his savings of \$2,000 joining

1866

The original of this Truman Dunham Co. price list is in the Historical Collection. Note Sherwin's and Dunham's names.

MAKE BETTER CUT

Truman Dunham & Co.'s business progressed satisfactorily, but in 1870 Mr. Dunham and Mr. Griswold became especially interested in the manufacture of linseed oil. Mr. Sherwin felt that the manufacture of paint offered broader opportunities for success and it was decided to dissolve the partnership. Mr. Dunham and Mr. Griswold taking the oil business, Mr. Sherwin and Mr. Osborn the paint department.

some time, Mr. E. P. Williams concluded that the Day, Williams & Co. glaze business could not provide sufficiently for his future, so he disposed of his share of the company.

Having known each other favorably, Mr. Sherwin and Mr. Williams got together and in February, 1870 formed the copartnership Sherwin-Williams & Co. to manufacture and sell paints.

Dissolution

Copartnership

Mr. Sherwin had the idea that he personally must know all about the products offered. To quote his own words: of 1916: "I kept in mind the homely motto, 'What is worth doing, is worth doing well.' I began by establishing a thorough office system. Then, in order to learn all I could about the goods and at the same time systematize the care and arrangement of them, I frequently put on old clothes and worked like a porter. I opened packages and examined their contents, found what they were for and how used, compared costs, and evenings studied all the books and catalogs I could find which in any way referred to these materials. While doing these things, I was training our employees in system, good order, and cleanliness everywhere about the establishment."

32

DISSOLUTION.

The partnership heretofore existing under the name of Thomas
London & Co., is this day dissolved by mutual consent. The busi-
ness of the late firm will be settled by their successors Messrs.
Sherwin, Williams & Co.

3

HENRY ALDEN SHERWIN

Born in Baltimore, Vermont on September 27, 1812. Educated in public schools and at the age of 18 started work in a general store. In 1836 he came to Cleveland where his first position was a wrap boy in a dry goods firm of which he later became cashier. Next, he joined a wholesale grocery firm where he became a partner.

July, 1856—Joined Truman Dunham in partnership selling Paint, Oil, Glass, Painters Supplies. Partnership dissolved 1878.

January, 1878—Mr. Sherwin was joined by E. P. Williams in partnership under the name of Sherwin-Williams & Co.

July 14, 1884—Incorporated as The Sherwin-Williams Co.

1884 to 1909—President of The Sherwin-Williams Co.

1909—Chairman of the Board of Directors.

June 26, 1916—Mr. Sherwin died.

Mr. Sherwin was the President and active head until 1909 when he became Chairman of the Board of Directors. He had rare business judgment, was very thorough and so far-seeing in the establishment of the Company policies that the principles laid down by the founders are still guiding the business.

INSERT NEW PARAGRAPH AT BOTTOM OF PAGE IN THIS SPACE

It is up to young men now in the organization to carry on this good work started by Mr. Sherwin and continued by so many fine men in the office and factory since then. The true course set by him and followed all these years will surely keep The Sherwin-Williams Co. in a leading position in the Paint, Varnish and Lacquer Industry.

New paragraph: By following these policies the Company attained the position of undisputed leader of the industry. With this goes a great responsibility. All products are honestly represented and the Sherwin-Williams name indicates the highest degree of quality and dependability. Every effort is made to package the products in convenient containers and to place them where the public can procure them most readily.

EDWARD PORTER WILLIAMS

Born in Cleveland, May 19, 1843.

1864—Graduated Western Reserve University with Phi Beta Kappa honors. Enlisted in Union Army 8th Ohio Volunteers.

1866—Embarked in glass manufacturing business called Day, Williams & Co. at Kent, Ohio.

1870—Sold out his interest and joined Henry A. Sharvin in the Sharvin, Williams & Co. partnership.

1870 to 1903—Vice President of The Sharvin-Williams Co. until his death May 4, 1908.

CHANGE

Mr. Williams was Vice President; a man of a fine personality. He worked very closely with the factory men, always particularly interested in production and in the operation of the plants. He gave much attention to the sales of the Company's products—particularly to the railways. When the business was smaller, he was always very close to the workers in the ranks, working here and there in the office, in the factory, doing the purchasing, selling goods and always lending a hand. He was very much respected by all of the staff and was always regarded as a true friend and wise counsellor.

NEW COPY

Mr. Williams was Vice President. He possessed many rare and lovable qualities. He was forceful and enthusiastic in everything he undertook in business. He was congenial and lovable as a friend.

He worked very closely with the factory men, always particularly interested in production and in the operation of the plants. When the business was smaller he was very close to the workers in the ranks. He worked here and there in the office or factory also, doing the purchasing, selling goods, and always lending a hand. He was very much liked by all the workmen and was always regarded as a true friend and wise counselor.

He gave much attention to the sales, particularly to the railways. He was a good mixer and the type who always exerted a good and wholesome influence on those who were fortunate enough to meet him.

SORENO PECK FENN

Born in Tallmadge, Ohio, April 25, 1844.
 1862—Attended Hammon Business College, Cleveland.
 1864—Enlisted in Union Army 164th Ohio Infantry. Clerk
 U. S. Pension Bureau, Cleveland.
 1865 to 1870—Clerk Big Four Railway freight office.
 1870—Employed as bookkeeper of Sherwin-Williams & Co.
 1880—Admitted to partnership becoming Treasurer.
 1903 to 1927—Vice President of The Sherwin-Williams Co.
 1893 to 1917—President Cleveland Y.M.C.A. Especially
 interested in education. Fenn College named after him.
 1895 to 1927—Active member of Old Stone Church. Gen-
 erous donor to civic and religious organizations.
 1927—Mr. Fenn died January 3, 1927.

OMIT hyphen

Mr. Fenn was the Treasurer, later becoming Vice President. More than any other one person, he was responsible for the sound financial policy and accounting methods of the Company.

ADD HERE:

Peace and quiet reigned in those early days. There were no type-writers (mechanical or feminine), no tabulating machines or other mechanical devices to disturb the quiet. Letters were written in long hand, usually with quill pens. ~~Copies were made on handmade paper in a letter press by the strong-armed boy.~~ The entire staff consisted of 12 men and boys. Now the entire staff includes 14,000 men and women.

OMIT THESE LINES

In 1870 Mr. Fenn was engaged as bookkeeper and in 1880 became a partner. This close cooperation of the three founders of the business continued as long as they lived.

This growth has been due to a continuity of good management. In the ~~25~~ years since the beginning, the Company has had only four presidents—Mr. Sherwin, Mr. Cottingham, Mr. Martin each holding the office for about 25 years and now Mr. Steudel as President is guiding the business ~~during the early period of the first quarter of the first century~~. The success of the business has been based upon the sound principles started by the founders and continued in the work of many capable individuals in the office, sales department and factory ~~since that time~~.

omit

ADD

From the beginning it has been the fundamental policy of the Company to carefully select men and women for each individual job and to see that the duties of each position are thoroughly understood. Then to allow the individual to work out these duties in his own way with full responsibility for the results. Innumerable successful men and women have risen to high positions through making the most of their opportunities. Merit has been the only requirement for advancement. Application, willingness to learn and hard work have invariably brought success. The field is unlimited to those who apply themselves fully.

ADD

Practically all positions of importance in the Company today are held by men who worked their way up from the bottom by applying themselves to their duties. This policy has brought together an organization of men and women of the highest caliber and anyone is fortunate to become associated with such people. These conditions have brought about a fine spirit among all and many close and lasting friendships have resulted.

38

ADD: from 83 formulas

In the first year of operation, this little plant in Cleveland produced 450,000 lbs. of oil paste paint equivalent to about 35,000 gallons. The combined capacity of the Company's many paint factories can now turn out this much paint in about an hour and a half. At the same time, auxiliary plants are producing the primary raw materials and packages required for this amount of finished product.

change word to equal

Mr. Sherwin was the active manager of the business until 1898 at which time the Company had grown to be a national concern doing a volume of business four times as much as when started. In 1898 feeling the need to relieve himself of some of the details, he appointed Mr. Walter H. Cottingham as general manager. Mr. Sherwin continued as President until 1909 when he became Chairman of the Board of Directors.

Mr. Cottingham had proven his ability to handle large affairs through the success of the Canadian business since 1895. His business career started in 1881 at the age of 15 when he became a clerk in a hardware store in Peterboro, Ontario. In 1887 he started in business for himself in Montreal selling paints, varnishes, colors and painters' supplies. In 1892 he obtained the agency for Sherwin-Williams Products in Canada and in 1895 induced Mr. Sherwin to establish a Sherwin-Williams factory in Montreal.

Mr. Cottingham was a great builder, and building on the sound foundation laid down by the Sherwin-Williams founders, he established many additional paint plants and factories for the production of auxiliary materials such as linseed oil, white lead, leaded zinc, lithopone, chemical products. He developed very wide distributing facilities, establishing warehouses throughout the entire country. This expansion is recorded in the chronological history appearing on following pages.

Add at 1 dry colors,

WALTER HORACE COTTINGHAM

Born in Oranmore, Ontario, January 8, 1886.
1881—Clerk in hardware store, Peterboro, Ontario.
1883—Clerk in James H. Douglas Co. Hardware and Paint Dealer, Montreal.
1887—Started paint store at 55 St. Peter St., Montreal.
1892—Acquired Canadian Agency for Sherwin-Williams Products.
1895—Organized The Walter H. Cottingham Company, Ltd. to manufacture Sherwin-Williams Paints in Canada.
1897—Merged with Sherwin-Williams Co.
1898—Came to Cleveland as General Manager of The Sherwin-Williams Co.
1900—Appointed Vice-President and General Manager. Great expansion program followed.
1906—Bought business of Lewis Berger & Sons, London, England.
1909 to 1922—President of The Sherwin-Williams Co. Business expanded 25 times former size.
1916—Became Chairman of the Board of Directors, continuing as President.
1922—Retired to England to follow up British, Australian, New Zealand and Canadian business.
1930—Died March 12 at his residence, Westley Hall in England.

ADD

ADD

Mr. Cottingham was an inspiring leader, a great organizer and administrator of the business, keeping in close touch with all details. He was a magnificent and dynamic speaker and a very good writer. The "Code of Principles" and many messages through the Company's magazine expressed many good thoughts in clear, forceful language.

He was very interested in good advertising and initiated many successful sales campaigns. As a sales leader he was second to none. During the 25 years of his active management the Company became integrated through the manufacture of many basic raw materials. Under his active management the business grew to be 25 times as great as when he took it up. He became President in 1909, also assumed the office of Chairman of the Board of Directors in 1916 and retired to England in 1922, Mr. George A. Martin succeeding him as President.

GEORGE ABRAHAM MARTIN

Born in Montello, Wis., November 7, 1868.
1877—First job as messenger in Chicago stockyards.
1880-7—With Union Brass Manufacturing Company selling railway car trimmings.
1887-88—Operated own paint business manufacturing and selling railway paints.
1890—Joined The Sherwin-Williams Co. Became superintendent Columbus Paint Company, Chicago.
1898-1905—Manager Western District, also Manager Trade Sales Dept. from 1901.
1906-16—Manager Auxiliaries, Linseed Oil, Lead, Landed Zinc, Chemical Products, Synthetic Resins, etc.
1916—Vice President, also General Manager from 1921.
1922-44—President. Established South American factories and many increases and improvements in plants. Business under his management grew to be three times its former size. Sponsored Metropolitan Auditions of the Air program for 16 years from 1928.

1940-44—Became Chairman of Board of Directors. Cited by Cleveland Chamber of Commerce as most distinguished citizen in the City of Cleveland, April, 1941.
Died November 1, 1944, Cleveland.

COPIES OF THIS TO
correct city to Montello

Mr. Martin's business career began in 1877 at the age of 12 when he was employed as messenger in the Chicago stockyards. From 1880 to 1887 he was occupied in selling railway car trims for the Union Brass Manufacturing Company, Chicago. At that time he became interested in paint manufacture and for the next three years he was in business for himself, manufacturing paints—particularly for railway use. He sold this business, coming to The Sherwin-Williams Co. in 1890 as Superintendent of the Chicago Plant.

In 1898 he was made Manager of the Western District and in 1901 also assumed the office of General Trade Sales Manager of the entire business with headquarters at Cleveland. In 1905 he became Manager of the Auxiliary Department manufacturing linseed oil, leaded zinc and other products. He was appointed Vice President in 1916 and in 1921 became General Manager of the Company and President in 1922.

The rapid growth of the business continued as Mr. Martin gave particular attention to manufacturing facilities including plants established in South America. He was very active and traveled something over 400,000 miles by plane. He brought into the organization the Subsidiary Companies. He was the active Manager until 1940 when he became Chairman of the Board of Directors. During his administration, the business grew to be three times as great as when he took it up.

Omit of the. ADD present

He was a great leader, a very good judge of men and many of the top-flight officials were his personal appointments. His policies were progressive, his accomplishments tremendous. For years he was considered the dean of the paint industry.

change doubled to trebled

In 1940 Mr. Arthur W. Steudel became President. His connection with The Sherwin-Williams Co. dates from 1908 when he was employed as an office boy in the Cleveland office of the North Central District. He advanced rapidly and in 1916 became manager of sales of dry colors and chemicals at Chicago, later being transferred to Cleveland in 1917 and New York in 1918 in this same capacity. Returning to Cleveland in 1923 as Assistant to the President, he became a Vice President of the Company in 1930 and a Director in 1936. Mr. Steudel has always been especially interested in extending the distributing facilities and in the introduction of new products. Since he became President in 1940, the business has more than doubled, until the present volume is more than 600 times greater than in 1866 when Mr. Sherwin started it.

Please list the paragraphs on NEW pages 42 and 43 in the order of the numbers given in front of the paragraphs on the left side.

Many other men in the management, factory and sales staff have contributed greatly to the growth of the business—the most outstanding of whom are:

No. 1.

Mr. H. D. Whittlesey who has contributed more to the development of salesmen and sales leadership than any other one in the sales organization. He joined the Company in Cleveland in 1887 as an order clerk at the age of 16. Advancing rapidly, he became manager of the Atlantic Coast District in 1900. He was called back to Cleveland in 1917 as Managing Director of Sales—became a Vice President and Director in 1919. He continued to be active in sales management until 1936 when he was made First Vice President and Executive for the Subsidiary Companies. Though he retired from active service in November, 1947, he is still a Vice President and a Director of the Company, and holds the record for the longest term of continuous service.

Very prominent among the many sales representatives was Mr. W. B. Albright. Employed as a salesman in 1885 he made a good record, introducing S-W products to dealers in Indiana and Michigan. He almost lost his life on a burning steamer out of Traverse City, Michigan in June, 1887. After spending some hours in the icy waters of Lake Michigan he was at last rescued and after a few days in the hospital was back on the job. Later, he was sent to New York to represent the Company as railway representative in the East. In 1894 he became a Director of the Company and continued in this capacity, handling an enormous volume of railway sales until his passing in 1925.

Mr. J. C. Beardslee came with the Company in 1880 as a clerk in the Cleveland factory office and later became General Superintendent. He served as General Superintendent of Manufacturing from 1886 until 1910. During this time he was responsible for the development of the high quality of paint, varnish and associated products. He continued as a director much interested in manufacturing problems until his passing in 1928.

Also, H. J. Hain contributed much to the manufacturing program over the years. Employed by Mr. Beardslee in 1893 in Cleveland as an office boy in the Shipping Department. He progressed well, showed promise and was sent to Chicago in 1899 to succeed Mr. Martin as superintendent of the Chicago factory. As the manufacture of leaded zinc began in Coffeyville, Kansas, in 1904 he was selected to establish this new undertaking.

In 1910 he was brought back to Cleveland as General Superintendent of all manufacturing to relieve Mr. Beardslee whose impaired health did not permit his continuance of the heavy responsibility of the greatly extended manufacturing program. Mr. Hain was in general charge of the extensive development of the Chemical Products Department begun in Chicago in 1914 and during the years 1917-18 he maintained his office in Chicago.

As manufacturing operations expanded he turned over many features to others, confining his attention to the management of the Auxiliary Departments—his outstanding achievements in this field were the development of Dehydrated Castor Oil in 1939 and the production of fibre cans in 1942. Mr. Hain was elected a Director of the Company in 1925 and a Vice President in 1931; retiring from active service in 1944.

There are many good factory men in supervisory positions today whose experience is about the same as that of John Weber. He was one of the most outstanding examples of a man working his way up from the bottom. As a small boy only 12 years old, John started in the factory, filling cans of First Quality Colors in 1876. He progressed to the jobs of mixing, grinding and shading and in 1890 was put in charge of filling orders, later becoming shipping clerk. In 1895 he took complete charge of all finished stock and the execution and shipping of all orders. This broad responsibility he discharged with great credit to himself and benefit to the Company. As the business grew larger he developed the organization of stockkeepers to handle this important function in all plants.

Given the privilege of retiring in 1926 at the completion of 50 years, he said he didn't want to retire but he just wasn't going to work so hard any more. Later he won the Cottingham Merit Fund Award for the outstanding achievement of disposing of a large surplus stock of a specialty which had not sold as well as expected. He was a very strong character with a stentorian voice which left no question as to his views about any problem. In 1931 he retired to his summer residence in the Adirondack Mountains where he passed away very quietly in 1940 at the age of 76.

Among the present top executives of the Company are many who started in minor positions and worked up through the ranks to their present status as did the following officers.

Mr. M. J. Fortier became a sales representative of The Sherwin-Williams Co. in New Orleans in 1931 after three years in this capacity with John Lucas & Co. Inc. In 1935 he was

made Manager of the New Orleans Division. From this point he progressed very rapidly, becoming Manager of the Mississippi Valley District in 1940.

men headed by Dr. E. E. Ware was organized to erect and operate this plant. The Government invested \$37,000,000 in the project which covered 23,000 acres, 35 square miles. The construction was completed in 12 months. The peak of employment during construction was 15,000 men. To operate the plant at full capacity employed a force of 6,000. During the period of operation, over ten million shells—75 mm to 155 mm, several million anti-tank mines and over a million 500 lb. bombs were loaded. On some days over 100 carloads of ammunition were shipped out. The production record was excellent, on some items attaining the highest degree of efficiency and economy, and the performance of the entire plant was better than average of the industry.

The quality of the product was perfect with not a single proving ground rejection during the entire period of operation. Because of the dependability of the product—shipments were permitted to go direct to the war front omitting the delay of proving ground inspection. In spite of the hazardous nature of the work, in the loading of this immense quantity of ammunition there was no serious accident. This especially reflected great credit on Dr. Ware and the many S-W men who cooperated with him. Operation ceased in August, 1945. Nearly all of these men have returned to employment with the parent company.

During the war a very large proportion of the Company's manufacturing facilities were devoted to military needs. War orders were given the right of way; civilian requirements standing aside. Several of the factories were cited for outstanding performance in executing orders. Many of the technical men cooperated fully with the Government experts in developing specifications of special products.

OMIT ENTIRE PAGE

From the staff 2,756 men and women entered into military service of whom 25 paid the supreme sacrifice. About 90% were welcomed back into the Company's employ in positions equal to or better than those they left. The Company is very proud of these fine young men and women—many of whom rose to high official positions in the Government service.

The Sherwin-Williams Co., with the Subsidiary Companies, have now over 14,000 employees. Since the beginning and up to December 31, 1947, 1,767 men and women have served for 25 years. 1,111 of these are still active in the business. Fifty-six have served for 50 years—of whom 7 are still active. This long service record is tangible evidence of the cordial relations which have existed between the Company and the staff since the beginning. Practically all of the officers and men in highest positions have worked up from the bottom and thus, the business is guided by long experience.

There are, in the organization, many younger men of great promise who are carrying the brunt of the active work. Throughout the entire organization—Sherwin-Williams and Subsidiary Companies—there are over 1,000 managerial and supervisory positions. Vacancies frequently arise and new positions are being constantly created. These openings are usually filled by promoting younger members of the staff to these broader opportunities. Most of the officials have risen from the ranks to their present high positions in this way. Only rarely does an outsider join the organization in one of the higher positions. This is when some special skill or knowledge is required beyond that possessed by some available member of the staff. There is every opportunity for any deserving young person of average

~~intelligence to rise to a high position in the organization by application and study encouraged by devotion to duty. To those who are industrious and have ability the Company offers opportunity and advancement.~~

FOREWORD

This Booklet has been prepared to inform the staff of the policies, products, facilities and the history of The Sherwin-Williams Co.

Mr. Sieplain, the author, has been recording facts gleaned from his experience of over 60 years of active service at Headquarters and in charge of plants at Montreal, Chicago and our associate, the Lewis Berger and Sons, Ltd. of London, England. He was employed by Mr. Sherwin and personally worked with the founders Mr. Sherwin, Mr. Williams and Mr. Penn and others who followed them in guiding the business. He has seen the Company grow from one small paint factory in Cleveland, and another in Chicago, to the present far-flung organization.

Since the 50th Anniversary Convention in 1916, he has been, among many other duties, in charge of the Historical Collection at Headquarters and has been collecting data about the Company and its products. This Historical Collection is open to all members of the staff and visitors at all times and is well worth a visit.

The products, history, and development of The Sherwin-Williams Co. covers such a broad field that this booklet serves only as a comprehensive reference index of the Company's activities. Experts on all subjects have been fully consulted in compiling it.

This booklet will enable the staff to talk in a well-informed way about the Company and its products. Such person-to-person, first-hand direct answer to questions is the best possible way of representing the Company and winning friends for it. Accurate information is the basis of good public relations.

We commend this booklet to the careful reading and close study of all members of the staff and suggest that it be kept as a book of reference.

A. W. Stoudal

AFFILIATED COMPANIES

In order to further extend the distributing facilities and utilise the full capacity of the plants manufacturing linseed oil, leaded zinc and other auxiliary products, The Sherwin-Williams Co. sought outlets for its oversupply of raw materials, and the following companies became a part of the organization on the date indicated:

- 1910 ROGERS PAINT PRODUCTS, Inc.
(Established in 1880 under name of
Detroit White Lead Works)
- 1917 THE MARTIN-SENGOUR CO.
(Established in Chicago in 1876)
- 1920 ACME QUALITY PAINTS, Inc.
(Established in Detroit in 1884, under name of
Acme White Lead & Color Works)
- 1929 THE LOWE BROTHERS CO.
(Established in Dayton in 1872)
- 1929 JOHN LUCAS & CO., Inc.
(Established in Philadelphia in 1849)
- 1929 W. W. LAWRENCE & CO.
(Established in Pittsburgh in 1884)

Each Company retains its own identity and manufactures and sells its own formula products to dealers and jobbers. Each maintains its own managerial organization, but all are members of the greater Sherwin-Williams Institution.

A recent innovation has been inaugurated by Sherwin-Williams and its six Affiliated Companies through joint sale of Kam-Tone, Super Kam-Tone, Kam Ole. By pooling the entire sales and advertising strength the consumer field has been much more completely covered.

(3)

FOREIGN COMPANIES

Sales beyond the boundaries of the United States grew to such an extent that it early became impossible for export shipping to satisfy the demand. Local companies were established with complete factory and warehouse facilities.

- 1895 THE SHERWIN-WILLIAMS COMPANY of Canada, Ltd.
Montreal, Canada
- 1929 CIA. SHERWIN-WILLIAMS, S.A.
Mexico City, Mexico
- 1930 THE SHERWIN-WILLIAMS CO. of Cuba, S. A.
Havana, Cuba
- 1940 SHERWIN-WILLIAMS ARGENTIAN, S. A.
Buenos Aires, Argentina
- 1944 SHERWIN-WILLIAMS De BRASIL, S. A.
Tintas e Vernizes, Sao Paulo, Brazil

In 1905 The Sherwin-Williams Co. became closely associated with Lewis Berger Sons, Ltd. of London, England. This company operates plants in the following cities and has distributing branches in many other locations.

- London, England
- Glasgow, Scotland
- Dublin, Ireland
- Paris, France
- Sidney, Australia
- Wellington, New Zealand
- Durban, South Africa

Beyond the manufacturing points indicated these Companies have adequate distributing facilities

S-W Products truly Cover-the-Earth.

(4)

SHERWIN-WILLIAMS DEALERS

From the very beginning S-W Products have been offered to the public through dealers. Many of these dealer relations have resulted in close friendships of long standing, most satisfactory business dealings -- in fact, practically business partnerships. Following are a few who have been S-W dealers for over 50 years:

Hoyt Hdw. Co.	Defiance, Ohio	1870
Hart Shaw Drug Co.	Adrian, Michigan	1870
Geo. B. Deardorff & Son	Dover, Ohio	1873
The Pfeiffer Co.	Cedar Falls, Ia.	1880
E. L. Durkee Co.	Gloversville, N. Y.	1883
John Trulsen	Princeton, Ill.	1885
W. C. Landon & Co.	Brithland, Vt.	1890
J. C. Baldrige Lbr. Co.	Albuquerque, N. M.	1891
Roddenberry Hdw. Co.	Cairo, Ga.	1892
Brown-Rogers-Dixon Co.	Winston-Salem, N.C.	1893
C. C. Hardman Co.	Shreveport, La.	1896
Strong & Hale Lbr. Co.	Portland, Conn.	1897
Leroy Lumber Co.	Laroy, Texas	1897
Schwickerdt Hdw.	Mankato, Minn.	1898
Salisbury Hdw. Co.	Salisbury, N. C.	1900
Lawson Hdw. Co.	Tullahoma, Tenn.	1901
Sledge & Barkley Co.	Lawrenceville, Va.	1902
E. O. Hall & Son	Honolulu, Hawaii	1904

In such trading areas which require the greatest distribution a Company branch has been established. These branches have served as a convenient source of supply for near-by dealers and have been a guide in merchandising, enabling the dealer to improve his sales through examples of methods successfully used in the S-W branches.

(5)

Cover-the-Earth Design

Large scale selling to consumers is promoted by good advertising. It has always been a policy of The Sherwin-Williams Co. to make its products well known to the public.

In the early days the Company's trade mark was a chameleon, the small lizard having the power to change color at will.

The "Cover-the-Earth" was devised in 1895 by C. W. Ford, (at that time advertising manager) and officially adopted as the Company trade mark in 1905. Its first use was as an enclosing slip with outgoing mail. It was also used for roadway signs to advertise the dealers handling Sherwin-Williams Products in near-by towns. This met with so much favor that it became very generally used and in 1905 was definitely established as the Company's trade mark superseding the chameleon.

SHERWIN-WILLIAMS PRODUCTS COVER THE EARTH

The protective paint on the outside of your house, the interior decoration of walls and furniture, the enameled design on your tube of toothpaste, the color on your print dress or other printed fabrics, the printing ink on the Sunday comic papers are all products of the paint industry and probably manufactured in one of the Sherwin-Williams plants.

The Company produces paints, colors, varnishes, lacquers of every description for houses, buildings, bridges, railways, ships, automobiles, aircraft and a wide variety of manufactured products. Bridges would soon become unsafe; automobiles and trucks would rust away; houses and buildings would rapidly fall into decay were it not for the protective coat of paint. Certain industries such as chemical manufacturing and petroleum refining require special finishes which will resist the destructive action of heat, moisture, fumes, solvents, and acids. S-W Products have been supplied to meet these requirements.

It is estimated that structures and equipment exposed to the weather are protected by paint at an annual cost of about $\frac{1}{4}$ of 1% of their value.

Paint, moreover, being color, has a very personal affect on all of us. We use it extensively to beautify our homes and take pride in selecting color schemes that make our homes pleasant, cheerful places in which to live. Psychologists understand the effect of color on people. They tell us that certain colors make us feel warm, others make us feel cool. They even know that the color scheme in an airplane definitely affects the possibilities of airsickness!

(7)

Industrial engineers have also studied the effect of color on individuals. They have found that repainting a factory according to certain color schemes will eliminate eye-fatigue, reduce accidents, and boost the morale of employees. They advise specific color schemes for heavy industry, other schemes for light industry. They tell us that a good color scheme in one geographic section of the country may be a poor one for another section. Paint in brief is an important part in making the world a happier place in which to live and work.

Sherwin-Williams makes finishes to beautify and protect the surfaces of most of the things with which we come in contact in the course of our everyday living. Furniture, radios, television sets, refrigerators, kitchen cabinets, office equipment, toys, electric appliances, metal and paper containers--including the cans in which paint itself is marketed--may all be finished with Sherwin-Williams products.

Paints, enamels, lacquers, and varnishes are made for application by brushing, spraying, dipping, or roller-coating. These finishes may be of either air-drying or baking types.

To understand how Sherwin-Williams has come to play such an important part in the economy of the entire country and to affect the day-to-day living and working of Americans, requires that one should know something about paint.

Paint is a coating or film used to protect and decorate. Basically, it consists of pigments, vehicles and reducers. Pigment, or solid coloring matter, is the ingredient which differentiates an opaque material like paint from a transparent coating. The vehicle binds the particles of pigment together into a uniformly colored composition and adheres to the surface, while a reducer thins the paint to a consistency suitable for applying.

To make certain that the quality of raw materials is the highest possible, Sherwin-Williams has over a period of years expanded operations from the production of paints to embrace also the production of the most important paint ingredients. This includes production of leaded zinc, lithopone, dry colors, chemical products, linseed and other oils, and synthetic resins.

Sherwin-Williams manufactures its own paint cans, and from the very beginning has operated its own printing plant for the production of labels and color cards.

Despite Sherwin-Williams' broad scope and great variety of products, paint, varnish, and lacquer are the most important. In fact, most of the non-paint products were developed because they are used in certain paints or because their manufacturing process is similar to one of the many chemicals that go into paint. The techniques and equipment required to produce these and other chemicals enable the Sherwin-Williams Co. to manufacture essential ingredients for drugs.

SHERWIN-WILLIAMS PRODUCTS

Description - Date of First Manufacture

Every individual Sherwin-Williams Product has been developed to be the highest grade material for the purpose intended. Independent market surveys show that S-W products enjoy a consumer preference of four to one over the next leading brand.

To insure dependability and uniformity, endless laboratory and field research is being devoted to the formulas and control of manufacture. All products are under constant investigation and improved as new and better raw materials or manufacturing processes become available.

One of the greatest contributions Sherwin-Williams has made to the Industry is the fundamental principle of offering to the public only the highest quality product designed specially for each individual requirement. Thus the Company has set a high standard for the Industry much to the benefit of the public.

Products have been designed for the best protection of every variety of requirement. A product is developed for each individual household and industrial need--obviously, a paint best suited for interior decoration is usually not suitable for exterior exposure. Over 50 distinct lines of products are offered for the convenience of the household. Each one is designed to produce the most satisfactory results for the intended use.

To insure that all products comply with standard quality, careful and thorough tests are made before filling into packages. Tests are constantly made of products sent in from branch stocks to insure package stability. Should any defect develop, the entire stock out in the field and in warehouses is immediately recalled.

(10)

The Following Are Some of the Important Products:

SWP--Sherwin-Williams Paint

First made in 1880 as the highest standard of prepared exterior house paint. It led the industry away from the cheap "ready-mixed paints" which were then offered to an unsuspecting public. Paint like SWP is now specified by the U. S. Government and many large consumers as the best paint for exterior wood surfaces.

"SWP is to Paint What Sterling is to Silver"

KEN-TONE--1941

Miracle Wall Finish

Flat, durable, washable interior finish suitable for painting over wallpaper, plaster, wallboard, brick, cement, painted or unpainted. Dries in one hour with no "painty" odor. A synthetic resin and oil finish supplied as semi-paste to be reduced with water to painting consistency. It revolutionized the painting habits of America.

SUPER KEN-TONE--1950

The New Deluxe Wall Paint

S K-T Can

This product dries in one hour to a rich, velvety finish, durable and washable. Twenty-one standard colors are supplied with directions for intermixing to innumerable artistic tints. Filled in new circle seal lithographed packages. (11)

KEM GLO--1948

Z O Case:

Miracle lustre enamel for kitchens, bathrooms, and woodwork. Kem Glo looks and washes like baked enamel. 21 standard colors supplied. Intermixing these produces innumerable artistic tints.

DECORATOR'S COLOREMIX--1948. A flat and semi-gloss oil base wall paint. Base whites and deep colors for mixing to any tint.

SEMI-LUSTRE--1925. A semi-gloss interior finish for walls and woodwork; hard drying and washable as enamel.

FLAT-TONE--1906. Flat, interior finish for plaster walls.

PORCH AND FLOOR ENAMELS--1884. Hard-wearing enamel for floors.

FLO-LAC--1901. A tough, hard-wearing, durable varnish stain for use on floors, woodwork, and furniture. Natural wood colors.

ENAMELOID--1903. A hard-drying decorative enamel for general interior use.

FLAT-RITE ENAMEL UNDERCOATER--1922. The ideal undercoat for enamel.

COMMONWEALTH RANCH RED--1903. For use on barns and other farm buildings.

SHINGLE STAIN--1904. Ready-mixed penetrating stain for wood shingle roofs.

FIRST QUALITY TINTING COLORS--1873. A complete range of tinting colors for painters, decorators, artists and sign writers. This line was the S-W Company's first manufactured product.

PAINTERCRAFT FINISHES--1939. A wide variety of paints, enamels, undercoaters, varnishes, reducers, driers and other products provided for the special need of the contracting painter.

MAR-WOT--1903. Superior quality interior varnish for floors, woodwork and furniture. Dries dust-free in two hours.

KEIPAR VARNISH--1914. King of all Spar Varnishes. For outside doors, boats and surfaces exposed to heat, cold, rain, snow and salt spray.

MISCELLANEOUS VARNISHES--1898. A wide variety of high quality varnishes for buildings, furniture, and industrial products, vehicles, implements, railway and marine equipment.

TAITE--1904. Paint and varnish remover.

GRAPHIC ARTS FINISHES--1938. For exterior and interior signs. Including Kam Bulletin Colors, Poster Silk Screen Colors, and Day Glo, a daylight fluorescent screen process color for display advertising.

FLAICAP--1908. A pure linseed oil soap for general use.

TRACTOR & IMPLEMENT PAINT--1896. Developed specially for farm implements. Dries quickly and affords maximum protection on exposed wood and metal surfaces.

BRICK & STUCCO PAINT--1909. High-quality, semi-gloss, oil paint for brick, concrete, and all types of masonry surfaces.

PASTE WOOD FILLER--1896. A dependable product for filling all open-grained wood. It dries hard and will not shrink.

WALL PRIMER AND SEALER--1926. Primes and seals plastered walls and wallboard enabling succeeding coats of wall finish to cover properly and dry evenly.

For complete information about any product consult descriptive literature.

SHERWIN-WILLIAMS BRUSHES

A complete line of brushes bearing the Company's name has been marketed since 1931.

Most of the brushes carrying the Sherwin-Williams name are made from the highest quality Chinese bristles. Scarcity of bristle during the war time brought about the development of synthetic bristles. The Company selected nylon and Neodite as the best of these.

ROLLER-KOATER

The Company was granted patent in 1945 for Roller-Koater. This device greatly simplifies the application of interior wall paints.

STYLE PERFECT WALLPAPER

For many years the Company's branches have sold a complete line of wallpapers so smartly styled and colored that they truly qualify and merit their trade name--STYLE PERFECT.

STYLE PERFECT wallpapers are precision built from exclusive designs and styles, most of which are produced for the Company, especially by the country's leading artists.

All patterns branded with the STYLE PERFECT seal are guaranteed washable and fadeproof.

INSECTICIDES

Entering this field in 1903 the Company was at one time the largest producer of arsenical insecticides. They made the fullest use of the wide distributing facilities of paint as a medium for supplying insecticides to growers. As the new compounds DDT and 2,4-D were introduced, the sale of these new wonderful products was vigorously undertaken with astonishingly large volume. A complete technical laboratory was established assisted by several college fellowships. Many scientific contributions were made to this new field. Difficulties arose as insects developed a natural immunity to these new products. As we did not manufacture the basic ingredients, aggressive action in marketing insecticides of this class was discontinued. We still maintain the sale of a large volume of products which can be handled safely and profitably.

(14)

**ARCHITECTURAL AND INDUSTRIAL
MAINTENANCE PRODUCTS**

The Company is an important manufacturer of the highest grade of paints, enamels and varnishes used for protection, decoration and maintenance of hotels, schools, hospitals commercial, public, industrial and factory buildings.

Color plays an important role in the modern industrial plant, through its contribution to better working conditions and the consequent improvement in productive efficiency, safety and employee morale. Recognizing this fact, Sherwin-Williams has developed a completely co-ordinated Color Harmony Program. This includes a complete line of satin-finish wall colors and enamels designed for attractive and cheerful interior decoration.

Many of the problems in industrial and chemical plants require materials designed to meet the most severe exposure conditions which are quite different from those of the home owner. These specialized products have been developed through much extensive research in the laboratory and in the field extending over a period of many years. The Sherwin-Williams Co. is well-equipped for this through its own broad experience in the Chemical Industry.

(15)

INDUSTRIAL FINISHES

The Company produces a substantial proportion of the country's requirement of finishes for every variety of industrial product. This includes innumerable formulas developed for many manufacturers. Paints, enamels, lacquers and varnishes are made for application by brushing, spraying, dipping, roller-coating, both air-drying and baking.

INDUSTRIAL FINISHING TECHNICAL SERVICE

Extensive laboratory and field research is devoted to the development of the best product for each individual consumer requirement. Many innovations for finishing have been introduced as a result of this research. Technical experts are available for engineering service to consumers in the use and development of especially designed Product Finishes.

Opex Lacquers and Kew Transport Enamels

In 1922 when lacquers were first used for finishing automobiles Sherwin-Williams introduced the Opex line. In 1932 Kew Transport Enamels were added. These lines include a complete range of primers, surfacers, and thinners. Also single-pigmented lacquers and enamels and mixing equipment are furnished enabling the finisher to blend to any color required for refinishing a car or truck.

picture of S-W can truck

(17)

SHUTWIN-WILLIAMS RAILWAY FINISHES

Coincident with the Company's first manufacture of house paint, special products were designed for railway locomotives, cars and buildings.

SHUTWIN-WILLIAMS MARINE FINISHES

Through long experience in the manufacture of Marine Paints and the supply of enormous quantities for Navy use, products of the highest quality have been developed.

(18)

New photo of plane

SHERWIN-WILLIAMS AIRCRAFT FINISHES

Air craft Finishes are designed to meet the most exacting requirements in application and to provide a durable finish to withstand the extremes of heat, cold, ice formation and heavy rains encountered in operating planes in high altitudes at great speed.

SHERWIN-WILLIAMS PETROLEUM FINISHES

The Petroleum Industry is a large consumer of paint and many special finishes for the production, refining, and distribution departments.

(19)

AUXILIARY PRODUCTS

Beginning about 50 years ago and even earlier, the Company started on the plan to manufacture important primary raw materials for use in paints, varnishes, lacquers, dry colors and other products. With the production of such raw material under full control, it is possible to regulate the quality of finished products to comply fully with the high standard set for all Sherwin-Williams Products. The following items are some of the most important:

WHITE LEAD--1910. Basic Carbonate White Lead--one of the most important white pigments used in paint.

LEAD LEADED ZINC OXIDE--1904. First made by the Company in 1904 in the Clark Smelting and Mining Company plant at Coffeyville, Kansas. Leaded zinc oxide is fumed from zinc ores containing a proportion of lead sulphide. The resulting pigment--a compound of zinc oxide and lead sulphate--is very well adapted for exterior house paints.

LITHOPONE--1917. A chemical compound white pigment containing zinc sulphide and barium sulphate. It is an important pigment in interior flat wall paint and white traffic line paints.

DRY COLORS--1896. Starting in a small pilot plant in Cleveland in 1896, a complete department was established in 1899. In 1909 manufacture was transferred to Chicago to a much larger plant. A complete line of chemical color pigments of highest quality are produced in this plant. Approximately 300 are made regularly for paints, enamels, and lacquers.

DISPERSED COLORS--1929. In 1929 a process was developed to incorporate chemical dry color pigments directly with oils or varnishes.

SHERWIN COLORS--1939. Colors combined with vehicle developed for printing designs on fabrics.

CHEMICAL PRODUCTS--1914. At the beginning of World War I it became impossible to procure from Germany dyes and intermediates required for the manufacture of dry colors. The Company immediately undertook to make these in Chicago.

A complete department was established with an adequate staff of chemists. Much development has taken place in this department and the plant has been greatly extended. Now many chemicals are produced for use in dry colors and other Sherwin-Williams Products. Also a very large tonnage is supplied to other consumers.

Over 75 of such intermediate chemicals are being regularly produced for paints, dry colors, drugs, rubber, petroleum and explosive industries.

SYNTHETIC RESINS--1929. Prior to the use of Synthetic Resins, varnishes were made from natural resin cooked with a drying oil and reduced with turpentine or other thinner. Due to the lack of uniformity of natural material, many difficulties were encountered and raw material supplies were definitely limited.

A very wide variety of Synthetic Resins, marvelous chemical compounds, have now been developed to produce varnishes far surpassing the former oleoresinous type in quality, adaptability and durability. Such Synthetic Resins lend themselves to mass production of varnishes that have performance characteristics undreamed of formerly. These Synthetic Varnishes have kept up with the rapidly advancing pace of the Industry.

The use of the name KVM on many products is a direct evolution of the Company's development of synthetic resins. It designates chemically evolved material.

LINSEED OIL--1902. To provide the large volume of this important oil used in S-W products, a plant was established in Cleveland in 1902. The oil is crushed from flax seed. A plant using a solvent to extract oil from flax seed, soya, castor or other beans and seeds has recently been installed.

DEHYDRATED CASTOR OIL--1939. The difficulties encountered in procuring Tung Nut Oil from China because of Chinese-Japanese war troubles caused American varnish manufacturers to develop a substitute. It was found that Castor Oil could be treated resulting in an oil which in some respects is superior to Tung Oil. The Sherwin-Williams Co. contributed much to this development.

LINSEED MEAL CATTLE FEED--1902. As a by-product from the crushing of flax seed, the Company is a large producer of Linseed Meal, a very much used cattle feed.

SULPHATE WOOD TURPENTINE--1936. Crude wood sulphate turpentine resulting from paper-making process is carefully refined into a very high quality of solvent.

TIN CANS--1874. The manufacture of tin cans was started in a small plant at Cleveland in 1874. Realizing the consumer's desire to receive a can to protect the contents for future use, a patent was obtained on a special design in 1877. The Tin Can Department grew rapidly and in 1921 the manufacture was transferred to Chicago to a greatly expanded up-to-date plant of great capacity. Shortage of tin plate during World War II brought about the manufacture of very satisfactory cans with a fibre body. Manufacture of lithographed cans was begun in 1951. A new plant was established at Hubbard, Ohio in that year. Capacity of both Chicago and Hubbard plants is now 500,000 a day.

RESEARCH, DEVELOPMENT AND CONTROL

About three hundred and fifty trained chemists and an almost equal number of trained laboratory and field technicians are constantly employed in the testing of raw materials, controlling manufacturing processes, the performance of all formulas and the development of new products. All factory operations are under strict control by experts to insure that finished products comply fully with Sherwin-Williams standards.

This work results in many new products and better methods, thus maintaining the leading position Sherwin-Williams Products occupy. Each product is designed to be the highest quality for the use intended and is offered to give the consumer the very best value and satisfaction for the individual requirement.

Special laboratories are devoting research to paint, varnish, synthetic resins, oils, dry colors and chemical products. Fellowships and scholarships are maintained in several colleges.

The laboratories are constantly experimenting with new raw materials as they appear on the market. New equipment and manufacturing processes are thoroughly investigated. Extensive exposure tests of finished products are carried on in the field at testing stations in Florida and at other points.

New requirements are constantly revealed by sales representatives and such problems are immediately referred to the laboratories for solution.

ADVERTISING

OUR ONE COLOR

Paint Card

From the beginning of the Company every effort has been made to present S-W Products to the public with comprehensive, truthful advertising. Each product is illustrated with attractive display signs, color cards, and literature describing its use.

Roadway signs, newspaper, magazines, moving pictures, and radio are used to the fullest extent to keep the S-W name before the public.

An outstanding feature is the Paint and Color Style Guide. First issued in 1940.

The Style Guide embodies a method entirely new in the industry showing Kodachrome pictures of finished painted exteriors or interiors of homes. These

Style Guide

and

Companion

First Color Card 1873

pictures give the home owner a much better comprehension of the results to be obtained than is possible from a small color chip. Up to 1952 there have been five issues of the Style Guide including 225,000 copies. Also, there have been three issues of the Style Guide Companion starting in 1950, a total of 55,000 copies.

(24)

PRINTING AND SAMPLING DEPARTMENT

From the very beginning of the business it was felt that printing and the making of sample cards and literature could be most satisfactorily controlled in a Company-owned plant.

Beginning in a small way in a little room 10 x 12 feet, Bob Joiner was compositor and pressman assisted by Tom Symes, printer's devil. They had three or four small fonts of type and a risky foot power press. Before very long two Gordon presses were bought and by 1876 it took six men and a boy to handle the work.

And so the department grew rapidly. Much of the early literature issued was very creditable and surpassed that of competitors in the industry.

In 1951 the whole printing and sampling department was moved to much larger quarters in North Oxnard. This plant occupies 70,000 feet of floor space, 18 modern high-speed presses, supplemented by cutting machines and other equipment. The painting of sample sheets is done by roller-coating and spraying to the extent of approximately 400,000,000 color chips for 16,000,000 color cards per year. Approaching 100,000,000 labels are produced each year. All this work is handled by a staff of approximately 250 people.

PEOPLE MAKE PAINT- The biggest single factor in the growth of a company is not its plants, warehouses, or laboratories. It is, and always will be, its men and women. Sherwin-Williams' reputation for quality and service, as well as its pre-eminent position in the paint industry, is the result of over 86 years of tireless effort expended by our employees.

In a company as large as Sherwin-Williams, it may be difficult to visualize readily why your job is especially important and how it is related to the thousands of other jobs in the Company; but it is the combined efforts of thousands of employees responsible for research, manufacturing, warehousing, and selling of our products--for the thousands of related activities that make possible a smooth-working, successful operation.

Genuine pride in a job--in products they helped make--in their company--and the things their company stood for, developed an enthusiasm or spirit which made Sherwin-Williams what it is today. Progress and success of a company is founded on this spirit in the hearts of men and women. It makes not only the company successful, but, more important, it offers opportunity and success to individual employees.

Just because Sherwin-Williams is big doesn't mean that an employee will get lost in it. Fortunately, most factory, office, and sales units are small enough so that you and your job are given careful individual attention and consideration.

PUBLIC RESPONSIBILITY - You, as an employee, have probably already found that to your friends and neighbors you are Sherwin-Williams. Whether you are a factory worker, a supervisor, a junior office clerk, a department head, a sales representative or a manager, your job is important and your duties are a vital part of the organization.

Paint consumers are always seeking advice and helpful suggestions. If you are not sure you know the answer to an inquiry,

don't hesitate to say, "I don't know, but I will find out and let you know". For answers to such questions consult your supervisor or refer the individual to the nearest Sherwin-Williams dealer or branch.

Creating and maintaining customer-goodwill is a responsibility none of us can evade--on or off the job. There is a lot of personal satisfaction in the fact that people we know regard each of us as a source of all information regarding Sherwin-Williams and all Sherwin-Williams products. After all, the final object is a satisfied consumer. If the consumer is not satisfied we cannot have a happy, contented family of employees.

OPPORTUNITY - Sherwin-Williams is growing and branching out into new fields. This, plus personnel changes, advancements, and retirements opens new opportunities for those competent to take advantage of them.

We believe in progressive advancement of capable employees who look upon Sherwin-Williams as a career. In the organization are many younger men of great promise carrying the brunt of the active work. In The Sherwin-Williams Co. and Affiliated Companies there are over 1,000 managerial and supervisory positions. Vacancies frequently arise and new positions are being constantly created. These are usually filled by promoting younger members of the staff to these broader opportunities. Most of the officials have risen from the ranks to their present high positions in this way. Only rarely does an outsider join the organization in one of the higher positions. This is when some special skill or knowledge is required beyond that possessed by some available member of the staff. There is every opportunity for any deserving young person of average intelligence to rise to a high position by application and study encouraged by devotion to duty. To those who are industrious and have ability the Company offers opportunity and advancement.

(27)

By fulfilling the requirements and obligations of your present position, you show that you have what it takes for a better job. The employee who advances is usually the one who not only does his own assignment well, but has taken an active interest in the work of others in his department and in the Company as a whole.

SECURITY - "A Company is Known by the Men it Keeps." An important value placed on any job is the security it offers. Every job has some risk, but the jobs valued highest are with those companies who through the years have proven their jobs have security--continuous employment in good times and bad.

Continuous employment, is closely linked with the rise and fall in business values. If business fluctuates materially there must be some fluctuation in the number of employees.

The Sherwin-Williams Co. and the Affiliated Companies, have now over 15,500 employees. Since the beginning and up to December 31, 1952, 2,377 men and women have served for 25 years; 1,435 of these are still active in the business; 63 have served for 50 years - 10 are still active. This long service record is tangible evidence of the cordial relations existing between the Company and employees since the beginning. On reaching 25 years of service each employee receives a fine gold watch and a long-service certificate as a token of the Company's appreciation. Practically all of the officers and men in highest positions have worked up from the bottom; thus, the business is guided by long experience.

COMPENSATION - Sherwin-Williams pays wages and salaries in line with comparable work in other companies of the same type. This is good business because it insures that we continue to attract high-grade employees.

(28)

The amount of your pay check is not the full amount of your pay. Part of your earnings have been deducted and set aside on your behalf. These deductions are either by Government requirement or at your request for a specific purpose.

Additional compensation you receive is in the many benefits paid for by Sherwin-Williams. The Company makes substantial payments over your pay check to maintain these benefit plans for you. A general description of these plans follows:

LIFE INSURANCE - All employees after three months' service with Sherwin-Williams are covered by a Group Life Insurance Policy in the amount of \$1,500. The cost of this plan is borne entirely by Sherwin-Williams. More insurance may be purchased by employees at very low rates. This program has been explained more fully in a separate booklet.

RETIREMENT PLAN - This provides for normal retirement at age 65 or earlier under certain conditions. Benefits are payable for life. This plan supplements the Federal Social Security program. The cost is borne entirely by The Sherwin-Williams Co., all employees being covered without contribution. A booklet is available explaining the plan in detail.

HOSPITALIZATION AND MEDICAL SERVICE - Where employee groups are large enough, Sherwin-Williams has made available through payroll deduction Group Hospital and Medical Service.

HEALTH AND SAFETY - Sherwin-Williams over the years has constantly improved working conditions in an effort to reduce health and safety hazards. Every job in Sherwin-Williams is safe-guarded in every reasonable way, but your personal care and effort is necessary to prevent mishaps and possible accidents.

CAFETERIAS - Where size of employee groups permits cafeteria facilities are maintained. These are subsidized by the Company and provide good wholesome food economically.

EMPLOYEE PURCHASES - Employees may purchase for their own use any Sherwin-Williams products and sundry items sold by Company branches, at prices substantially below retail.

CREDIT UNIONS - Under the control of Federal or State Laws, many units of Sherwin-Williams' employees belong to credit unions. These are actually banks, providing a safe organization in which to save money and a convenient source for loans.

VACATIONS - Sherwin-Williams years ago set up a plan insisting that employees take vacations. After one year's service employees are eligible for one week vacation with pay. This increases with additional service to three weeks' vacation with pay.

EMPLOYEES' ACTIVITIES - Sherwin-Williams is very glad to assist in athletic or social activities promoting employee health and recreation and a spirit of good sportsmanship.

DISABILITY BENEFIT PLANS - For regular permanent full time factory employees and the hourly payroll, a method is in force to compensate employees with liberal benefits during illness.

THE STORY OF
THE MEN OF SHERWIN-WILLIAMS

This fascinating story should inspire those coming into the organization that here is a company founded and carried forward by men who began early and made full use of the opportunities offered.

The Sherwin-Williams Co. was started in 1866 when Henry A. Sherwin, then 24 years old, invested his savings of \$2,000 joining Truman Dunham and O. O. Griswold in partnership under the name of Truman Dunham & Company. They sold white lead, linseed oil, turpentine, varnishes, colors, glass, brushes and painters' supplies. (Glass was bought from Day Williams & Co. of Kent, Ohio). In 1869 Mr. A. T. Osborn was admitted into the partnership.

H. A. Sherwin
1866

The original of this Truman Dunham Co. price list is in the Historical Collection.

Note Sherwin's and Dunham's names.

Truman Dunham & Co.'s business progressed satisfactorily, but in 1870 Mr. Dunham and Mr. Griswold became especially interested in the manufacture of linseed oil. Mr. Sherwin felt that the manufacture of paint offered broader opportunities for success and it was decided to dissolve the partnership. Mr. Dunham and Mr. Griswold took the oil business, Mr. Sherwin and Mr. Osborn the paint department.

(31)

At the same time, Mr. F. P. Williams concluded that the Day, Williams & Co. glass business could not provide sufficiently for his future, so he disposed of his share of the company.

Having known each other favorably, Mr. Sherwin and Mr. Williams got together and in February, 1870 formed the copartnership Sherwin Williams & Co. to manufacture and sell paints.

Mr. Sherwin had the idea that he personally must know all about the products offered. To quote his own words of 1916: "I kept in mind the homely motto, 'What is worth doing, is worth doing well.' I began by establishing a thorough office system. Then, in order to learn all I could about the goods and at the same time systematize the care and arrangement of them, I frequently put on old clothes and worked like a porter. I opened packages and examined their contents, found what they were for and how used, compared costs, and evenings studied all the books and catalogs I could find which in any way referred to these materials. While doing these things, I was training our employees in system, good order, and cleanliness everywhere about the establishment."

(32)

1866, Sherwin-Williams & Co. first
store at 118 Superior Street,
Cleveland

The first place of business was the modest store at 118
Superior Street. At this location they continued to sell the
paint materials as offered by Truman Dunham & Company. From
this modest beginning has grown the remarkable chain of 800
branches of which the following is a good illustration.

One of the present 800 branches
of Sherwin-Williams and affiliated
Companies

(33)

Mr. Sherwin was the President and active head until 1909 when he became Chairman of the Board of Directors. He was very fair and just to all employees, had rare business judgment, was very thorough and so far-seeing in the establishment of the Company policies that the principles laid down by the founders are still guiding the business.

By following these policies the Company attained the position of undisputed leader of the industry. With this goes a great responsibility. All products are honestly represented and the Sherwin-Williams name indicates the highest degree of quality and dependability. Every effort is made to package the products in convenient containers and to place them where the public can procure them most readily.

It is up to young men now in the organization to carry on this good work started by Mr. Sherwin and continued by so many fine men of the office, sales, and factory staff since then. The true course set by him and followed all these years will surely keep The Sherwin-Williams Co. in a leading position in the Paint, Varnish and Lacquer Industry.

(34)

Mr. Williams was Vice President. He possessed many rare and lovable qualities. He was forceful and enthusiastic in everything he undertook in business. He was congenial and lovable as a friend.

He worked very closely with the factory men, always particularly interested in production and in the operation of the plants. When the business was smaller he was very close to the workers in the ranks. He worked here and there in the office or factory also, doing the purchasing, selling goods, and always lending a hand. He was very much liked by all the workmen and was always regarded as a true friend and wise counselor.

He gave much attention to the sales, particularly to the railways. He was a good mixer and the type who always exerted a good and wholesome influence on those who were fortunate enough to meet him.

Mr. Fenn was the Treasurer, later becoming Vice President. More than any other one person, he was responsible for the sound financial policy and accounting methods of the Company.

In 1870 Mr. Fenn was engaged as bookkeeper and in 1880 became a partner. This close cooperation of the three founders of the business continued as long as they lived.

Peace and quiet reigned in those early days. There were no typewriters (mechanical or feminine), no telephones, no tabulating machines or other mechanical devices to disturb the quiet. The entire staff consisted of 12 men and boys. Now the entire staff includes 14,000 men and women.

Starting with a capital of \$15,000 in 1870, the Corporation has grown to now have a capital and surplus of over \$80,000,000. The volume of business now transacted is more than 800 times as great as it was the first year.

This growth has been due to a continuity of good management. In the 86 years since the beginning, the Company has had only four presidents--Mr. Sherwin, Mr. Cottingham, Mr. Martin each holding the office for about 25 years and now Mr. Stendal as President is guiding the business. The success of the business has been based upon the sound principles started by the founders and continued in the work of many capable individuals in the offices, sales department, and factory since that time.

From the beginning it has been the fundamental policy of the Company to carefully select men and women for each individual job and to see that the duties of each position are thoroughly understood. Then to allow the individual to work out these duties in his own way with full responsibility for the results. Innumerable successful men and women have risen to high positions through making the most of their opportunities. Merit has been the only requirement for advancement. Application, willingness to learn and hard work have invariably brought success. The field is unlimited to those who apply themselves fully.

Practically all positions of importance in the Company today are held by men who worked their way up from the bottom by applying themselves to their duties. This policy has brought together an organization of men and women of the highest caliber and anyone is fortunate to become associated with such people. These conditions have brought about a fine spirit among all and many close and lasting friendships have resulted.

1873 - First Plant
Cleveland. Between
Cuyahoga River and
Ohio Canal

Present Cleveland
Plant occupies the
same site.

Sherwin Williams & Co. entered into the manufacture of paint in 1873 when an old cooper shop on the site of the present Cleveland Plant was bought from the Standard Oil Company. A small engine and boiler and one second-hand stone mill, a putty chaser and mixer were installed. From this modest start, plowing back into the business much of the earnings, the plants have grown until now there are 38 factories in North and South America with over 700 buildings, equipped with the most modern paint, varnish, lacquer and chemical-making machinery.

1947 Chicago
Plant

100 Acres
160 Buildings
2,500 Employees

(38)

In the first year of operation, this little plant in Cleveland produced from 83 formulas 450,000 lbs. of oil paste paint equal to about 35,000 gallons. The combined capacity of the Company's many paint factories can now turn out this much paint in about an hour and a half. At the same time, auxiliary plants are producing the primary raw materials and packages required for this amount of finished product.

Mr. Sherwin was the active manager of the business until 1898 at which time the Company had grown to be a national concern doing a volume of business four times as much as when started. In 1898 feeling the need to relieve himself of some of the details, he appointed Mr. Walter H. Cottingham as general manager. Mr. Sherwin continued as President until 1909 when he became Chairman of the Board of Directors.

Mr. Cottingham had proven his ability to handle large affairs through the success of the Canadian business since 1895. His business career started in 1861 at the age of 15 when he became a clerk in a hardware store in Peterboro, Ontario. In 1867 he started in business for himself in Montreal selling paints, varnishes, colors and painters' supplies. In 1892 he obtained the agency for Sherwin-Williams Products in Canada and in 1895 induced Mr. Sherwin to establish a Sherwin-Williams factory in Montreal.

Mr. Cottingham was a great builder, and building on the sound foundation laid down by the Sherwin-Williams founders, he established many additional paint plants and factories for the production of auxiliary materials such as linseed oil, white lead, loaded zinc, lithopone, chemical products. He developed very wide distributing facilities, establishing warehouses throughout the entire country. This expansion is recorded in the chronological history appearing on following pages.

Mr. Cottingham was an inspiring leader, a great organizer and administrator of the business, keeping in close touch with all details. He was a magnificent and dynamic speaker and a very good writer. The "Code of Principles" and many messages through the Company's magazine expressed many good thoughts in clear, forceful language.

He was very interested in good advertising and initiated many successful sales campaigns. As a sales leader he was second to none. During the 25 years of his active management the Company became integrated through the manufacture of many basic raw materials. Under his active management the business grew to be 25 times as great as when he took it up. He became President in 1909, also assumed the office of Chairman of the Board of Directors in 1916 and retired to England in 1922. Mr. George A. Martin succeeding him as President.

(40)

Mr. Martin's business career began in 1877 at the age of 12 when he was employed as messenger in the Chicago stockyards. From 1880 to 1887 he was occupied in selling railway car trims for the Union Brass Manufacturing Company, Chicago. At that time he became interested in paint manufacture and for the next three years he was in business for himself, manufacturing paints--particularly for railway use. He sold this business, coming to The Sherwin-Williams Co. in 1890 as Superintendent of the Chicago Plant.

In 1898 he was made Manager of the Western District and in 1901 also assumed the office of General Trade Sales Manager of the entire business with headquarters at Cleveland. In 1905 he became Manager of the Auxiliary Department manufacturing linseed oil, leaded zinc, and other products. He was appointed Vice President in 1916 and in 1921 became General Manager of the Company and President in 1922.

(41)

The rapid growth of the business continued as Mr. Martin gave particular attention to manufacturing facilities including plants established in South America. He was very active and traveled something over 400,000 miles by plane. He brought in to the organization the Affiliated Companies. He was the active Manager until 1940 when he became Chairman of the Board of Directors. During his administration, the business grew to be three times as great as when he took it up.

He was a great leader, a very good judge of men and many present top-flight officials were his personal appointments. His policies were progressive, his accomplishments tremendous. For years he was considered the dean of the paint industry.

In 1940 Mr. Arthur W. Stoudel became President. His connection with The Sherwin-Williams Co. dates from 1908 when he was employed as an office boy in the Cleveland office of the North Central District. He advanced rapidly and in 1916 became manager of sales of dry colors and chemicals at Chicago, later being transferred to Cleveland in 1917 and New York in 1918 in this same capacity. Returning to Cleveland in 1923 as Assistant to the President, he became a Vice President of the Company in 1930 and a Director in 1936. Mr. Stoudel has always been especially interested in extending the distributing facilities and in the introduction of new products. Since he became President in 1940 the business has more than trebled, until the present volume is more than 800 times greater than in 1866 when Mr. Sherwin started it.

Many other men in the management, factory and sales staff have contributed greatly to the growth of the business--the most outstanding of whom are:

Mr. H. D. Whittlessey contributed more to the development of salesmen and sales leadership than any other one in the sales organization. He joined the Company in Cleveland in 1887 as an order clerk at the age of 16. Advancing rapidly he became manager of the Atlantic Coast District in 1900. He was called back to Cleveland in 1917 as Managing Director of Sales-- became a Vice President and Director in 1919. He continued to be active in sales management until 1936 when he was made First Vice President and Executive for the Affiliated Companies. Though he retired from active service in November, 1947, he is still a Vice President and a Director of the Company.

Mr. C. M. Lemperly's experience has been in the advertising and sales field. After attending Williams College he joined the Company in 1907 in the Advertising Department. He became General Manager of Publicity in 1921 and in 1943 was appointed Vice President and Director of Sales. In 1945 he became a member of the Board of Directors. In 1952 he withdrew from active sales management, devoting his attention entirely to Public Relations.

Mr. L. H. Schreeder came into the organization as an office boy in 1907 under Mr. Fenn, Treasurer. During his early years of employment, he studied at Cleveland Law School attaining a legal degree and admittance to the Ohio Bar. He enjoyed the closest association with Mr. Fenn, Mr. Cottingham and Mr. Martin and grew up under their direction. This experience and making the most of his opportunities brought about his appointment as Treasurer of the Company in 1922 and his election as a Director in 1926 and as a Vice President in 1943.

(h3)

Mr. F. J. Squires entered the Company's employ from high school in 1912 in the Engineering and Construction Department of the Cleveland Plant. He continued his education studying accounting and commercial law at the Y.M.C.A. and Pace School. Except for two years in the military service during World War I he progressed through several departments in Cleveland, becoming Assistant Manager of Credits in 1922. Continuing in this field until 1943, he became Treasurer of the Acme White Lead and Color Works in Detroit. In November, 1947 he became Secretary of The Sherwin-Williams Co.

Dr. N. E. Van Stone was employed as a chemist in the Chemical Products Department of Chicago in 1917 after graduation from the University of Michigan. He brought together an organization of chemists who developed the manufacture of chemical products. His activities also include the development of lacquers, synthetic resin and many of the new products which are now being marketed successfully. His present office is Vice President and Director of Special Products.

Mr. S. B. Coolidge, a graduate of Yale University, began as a clerk in the Cleveland Linseed Oil Dept. office in 1924. He is now a Vice President and Director of Auxiliaries including lead, linseed oil, leaded zinc, lithopone and tin can departments.

Mr. E. M. Van Cleve, Vice President and Director of Pigment, Chemical, and Color Division was employed March 19, 1919 in the Industrial Sales Department at Newark, N. J. He is a graduate of Princeton University, attaining a B.S. Degree in 1917. He served as an Ensign in the Navy in World War I. In November, 1919 he became a representative in the P C & C Department, becoming General Manager of the department in 1944. His success in handling this very important division of the business brought him appointment to his present position in December, 1951.

(144)

Mr. A. H. Burt became a clerk in the Advertising Department in 1912 after graduation from high school. He continued in extension educational courses. He served in Sales Promotion, on a Trade Sales territory, and later as Manager of the Cleveland Division. In January, 1943 he became General Manager of Trade Sales business of the Company. In 1946 he was appointed Regional Director of North Central Region. This brought him the appointment as Director of Sales in June, 1952.

The foregoing story of the growth of The Sherwin-Williams Co. illustrates the fine opportunity offered to everyone becoming associated with the Company. There is a field wide open for a successful career to those capable. It offers a scope for all talents and a sure reward for ability and conscientious effort. Progress in the organization is sure to come from close application to duties. There are innumerable examples of men in high positions because they made the most of the opportunities offered.

W. H. Cottingham Author - 1906

OUTLINE OF HISTORY OF
THE SHERWIN-WILLIAMS COMPANY

"I know of no way of judging the future but by the past."

Patrick Henry

Speech in Virginia Convention, 1775

- 1866--Henry A. Sherwin entered the paint business in partnership with Truman Dunham and O. O. Griswold under the name of Truman Dunham & Co. at 118 Superior Street, Cleveland, Ohio. They sold wholesale and retail paints, varnishes, oils, glass and painters' supplies. Bought glass from Day, Williams & Co., Kent, Ohio.
- 1869--New partnership formed including A. T. Osborn. Erected small linseed oil works.
- 1870--Truman Dunham partnership dissolved, Dunham and Griswold taking oil business, leaving paint, etc., to Sherwin and Osborn. Edward P. Williams sold out his share of the Day, Williams & Co., glass business and joined Sherwin and Osborn in partnership under the name of Sherwin Williams & Co., 118 Superior Street. Moved to 126 Superior Street. They started with capital of \$45,000. Sorens P. Penn employed as bookkeeper.
- 1871--Mr. Sherwin formed partnership with Murphy & Company of New York to manufacture varnish in Cleveland under the name of Murphy-Sherwin & Co.
- 1873--Began manufacturing paints in Cleveland in one small building on site of present Cleveland Plant. First year production 83 formulas, 450,000 lbs. of Oil Paste Paint. Now thirty-eight factories annually produce over one billion pounds. New partnership formed admitting W. H. Glover. Capital \$70,000.

(46)

- 1874--Manufacture of tin cans begun. Made by hand by three men and boy. Chicago and Hubbard, Ohio plants now employ 500 people producing 500,000 plain and lithographed cans a day. Printing of labels and color cards begun in a little room about 10 x 12 feet. Bob Joiner compositor and pressman, assisted by Tom Symes printer's devil. They had three or four small fonts of type and a rickety foot power press. Now 275 people occupy 70,000 square feet of floor space in North Olmsted--18 modern high-speed presses supplemented by other equipment.
- 1877--Developed a new grinding mill. Mr. Glover's interests absorbed. Warehouse established in Chicago 1879.
- 1880--S. P. Fenn admitted into partnership. Began manufacture of SWP Outside House Paint. J. C. Beardlee employed. Bought land on Canal Street, Cleveland, for office and warehouse.
- 1882--Moved office and warehouse to new building on Canal Street. Turned over all retail and local business to A. T. Osborn and A. Sherwood who opened retail store on Seneca Street. Osborn retired from Sherwin Williams & Co. partnership.
- 1884--Partnership dissolved and The Sherwin-Williams Co. incorporated July 18, 1884. Capital \$300,000. Employed Dr. Percy Heyman, Ph. D. of M. I. T. So far as is known first chemist in the paint industry. Disasterous fire destroyed much of Cleveland plant. New and enlarged building and equipment provided immediately.
- 1886--Capital increased to \$400,000.
- 1887--Established New York office. E. B. Whittlesey employed. Employee's Mutual Benefit Society organized providing sick and death benefit payments to employees.

(47)

- 1888--Began manufacture in Chicago under name Calumet Paint Co. in a factory bought from the Pullman Company.
- 1889--Discontinued Murphy-Sherwin & Co. partnership arrangements. Capital \$500,000.
- 1890--George A. Martin employed as Superintendent of Calumet Paint Co. Organized Sherwin-Williams Transit Co., purchasing Steamer Lindsay for transportation of lumber for boxes and later for flaxseed. The Company passed the \$1,000,000 mark in sales.
- 1891--First retail branch--Atherton Paint Co., Worcester, Mass.
- 1892--Canadian Agency let to Walter H. Cottingham. Capital increased to \$750,000.
- 1893--Organized Cleveland Box Co., manufacture of wood boxes.
- 1895--The Walter H. Cottingham Co., Ltd. and Cottingham Varnish Co. organized to manufacture Sherwin-Williams Products and Pratt & Lambert Varnishes in Montreal. First use of "Cover-the-Earth" design for roadway signs and posters. Adopted as trade-mark in 1905 displacing entirely the Chameleon trade-mark which had been used prior to this time.
- 1897--Established warehouse at Philadelphia. Advertising and sampling department moved to much larger quarters in new building on Michigan Street. Complete lunchroom facilities provided for Cleveland employees, supplying wholesale food at low cost; first Company lunchroom. The Sherwin-Williams Co. of Canada, Ltd., organized absorbing The Walter H. Cottingham Co., Ltd. and Cottingham Varnish Co.

(48)

- 1898--A complete line of varnishes was manufactured and put on the market. Walter H. Cottingham appointed General Manager of The Sherwin-Williams Co. Mr. Martin became Manager of Western District. Began issue of The Chameleon, a Company magazine for employees. Later superseded by the Sherwin-Williams WORLD.
- 1899--Began the manufacture of dry colors in Cleveland.
- 1900--Paint and varnish factory constructed at Newark, N.J. Warehouse established at San Francisco.
- 1901--Capital increased to \$1,500,000. Mr. Martin appointed Manager of Trade Sales.
- 1902--Capital increased to \$2,500,000. Linseed Oil Mill erected at Cleveland. Foremans Club organized in Cleveland. First of the many clubs later established among the staff. Get-Together-Club organized in Cleveland including heads of departments and their first assistants.
- 1903--Dry Color and Insecticide plants built in Chicago. Cleveland plant extended. Opened branch office in London, England. Capital increased to \$3,500,000. Mr. E. P. Williams died, having been a business partner with Mr. Sherwin for thirty-three years. He was succeeded by Mr. Cottingham as Vice President.
- 1904--Purchased mine at Magdalena, New Mexico and Zinc Oxide Smelter at Joplin, Missouri, beginning manufacture of Leaded Zinc.
- 1905--Purchased business of Lewis Berger & Sons, Ltd., London, England. Mr. Martin appointed Manager of Auxiliaries. Adopted "Cover-the-Earth" design as trade-mark.

- 1906--Established smelter at Coffeyville, Kansas. Warehouse at Dallas.
- 1907--Disposed of the Steamer Lindsay to liquidate Sherwin-Williams Transit Co. Capital increased to \$6,000,000.
- 1908--Soap manufacturing department established at Cleveland. Arthur W. Staudel employed.
- 1909--Mr. Sherwin became Chairman of the Board of Directors. Mr. Cottingham appointed President and Mr. Fenn Vice President. Increased capital to \$8,000,000.
- 1910--Purchased Detroit White Lead Works factory. White lead manufacture begun in Chicago.
- 1911--Sold Canadian District and Lewis Berger & Sons, London, to Sherwin-Williams Co. of Canada, Ltd. Pension plan adopted.
- 1913--Capital increased to \$9,000,000. A complete line of wall paper was marked through S-W branches.
- 1914--Started Chemical Products plant, Chicago, manufacturing Dyes and Intermediates, because supplies were no longer procurable from Germany on account of war.
- 1916--Company celebrated 50th Year of the business with Golden Jubilee Convention. Mr. Sherwin died at the age of 74 years having devoted 50 years to the paint business. In that time he contributed more to the industry than any one person before or since. The sound business principles he established continue to guide The Sherwin-Williams Co., as the leading establishment in this field. Mr. Cottingham succeeded him as Chairman of the Board in addition to continuing as President. Mr. Martin becomes Vice President.

(50)

- 1917--Purchased The Martin-Samuel Co., Chicago. Manufacture of Acetic Acid and Lithopone established at Chicago. Continued until 1932. Lithopone continued until 1933 when production was consolidated with new plant erected at Coffeyville in 1931. Capital increased to \$21,000,000.
- 1918--Standard tri-colored label adopted for all S-W Products.
- 1919--Purchased Hemingway & Co. plant, Bound Brook, N.J. Established paint plant at Oakland.
- 1920--Purchased Acme White Lead & Color Works, Detroit. Now Acme Quality Paints, Inc. Mr. Fern completed 50 years of active service, continuing as Vice President and Director. Capital increased to \$60,000,000. In this year the Company did its first public financing in the issuing of \$15,000,000 of preferred stock. From this date forward full publicity has been given to the annual financial statement as the sale of this preferred stock to thousands of share holders made it a matter of public interest.
- 1921--Erected new Tin Can Plant at Chicago, transferring manufacture from Cleveland. Insecticide plant erected at Oakland. Quick-process White Lead Department added at Chicago.
- 1922--Manufacture of Lacquer begun in Chicago. Mr. G. A. Martin appointed President. Mr. Cottingham became Chairman of the Board of Directors.
- 1923--The \$100,000 Club organized for representatives. Membership requirement, annual sales in excess of \$100,000.

(51)

- 1927—Mr. S. P. Fern died ending a long career as Treasurer and Vice President. He was the last of the founders, having devoted fifty-seven years to the business.
- 1928—J. C. Beardslee died after many years as General Superintendent in charge of manufacture and as a Director. He contributed more than any other one person to the high standard and quality of S-W paint and varnish products.
- 1929—Purchased The Love Brothers Co. plant at Dayton, Ohio and the John Lucas & Co., Inc., at Philadelphia—also the W. W. Lawrence & Co., Pittsburgh. Began manufacture of Synthetic Resins. Established branch in Mexico City.
- 1930—Mr. Cottingham died after a brilliant career in which he greatly expanded the business from a Cleveland Company to a world-wide establishment, the unquestioned leader in the Paint, Varnish and Lacquer Industry. Cleveland Headquarters office moved to Midland Building, August, 1930. Established paint and varnish plant in Havana, Cuba.
- 1931—Lithopone Department moved from Chicago to Coffeyville. Bought back controlling interest of The Sherwin-Williams Co. of Canada, Ltd., for the parent U. S. Sherwin-Williams Co. A complete line of brushes under S-W name put on the market.
- 1935—Allied Research Laboratory established at Chicago. Metropolitan Auditions Radio Program started and continued for 10 years. 25 contestants winners of \$1,000 prize and Metropolitan Opera Company contracts. Three others won Metropolitan contracts, four won \$500 scholarships. New warehouse at Newark Plant.

(52)

- 1936--Large addition to plant at Dallas. Sulphate Wood Turpentine and Synthetic Resin Plant added at Chicago. Consolidated manufacture of Insecticides at Bound Brook, discontinuing the Chicago Insecticide Plant.
- 1937--Large addition to Chicago Dry Color Plant for production of Dispersed Colors. Mr. Whittlesey completed 50 years of service.
- 1939--Established Dehydrated Castor Oil plant in Cleveland. Established Sherdye Plant at Gibbstown.
- 1940--Established plant at Buenos Aires, Argentine. Introduced Style Guide--revolutionary methods of illustrating to the public the results obtained with various paint finishes. Continued for five editions to 1952. Total publication 225,000 copies. G. A. Martin completed 50 years in the Company's service and became Chairman of the Board of Directors, A. W. Stendel succeeding him as President.
- 1941--Chemical Products Plant enlarged for the production of basic chemicals for Sulfa Drugs, Atabrine, and sackless powder. Extensive additions to paint and varnish plants at Cleveland, Chicago, Newark and Dallas. Very large warehouse erected in Chicago. Kem-Tone put on the market early in the year as an Institutional Product, met with remarkable consumer acceptance.
- 1943--Large addition to Chicago Tin Can Plant for manufacture of fibre-bodied cans
- 1944--Mr. Martin died at the age of eighty years. In his passing the Industry lost a true friend referred to for many years as the "Dean of the Paint Industry." Plant established at Sao Paulo, Brazil.

(53)

1945--Pastroy DDT, Insecticide, and Weed-No-More, 2,4-D Selective Weed Killer, put on the market for general sale by The Sherwin-Williams Co. and all Affiliated Companies.

1941 to 1945--The War Department drafted S-W Company to construct and manage a shell-loading plant at Carbondale, Ill. Dr. E.S. Ware with a group of 60 S-W men handled this project covering 35 square miles. During the period of operation many millions of shells, anti-tank mines, and bombs were filled. Some days over 100 carloads of ammunition were shipped out. Operation ceased in August, 1945 and the plant was dismantled. The S-W men returned to their former positions.

During the war a large proportion of the Company's manufacturing facilities were devoted to military needs.

From the staff 2,756 men and women entered the military service of whom 25 paid the supreme sacrifice. About 90% were welcomed back into the Company's employ.

1946--Construction of new power house started at Chicago, greatly increasing capacity. Gibberson Plant entirely remodelled doubling the capacity. Bound Brook Plant enlarged. Kem-Tone, the Lin-X line, Pastroy, Weed-No-More and Bag Blaster marketed by Affiliated Companies through grocery and drug store chains. Trade Sales, Industrial and Transportation, Automotive and other lines of S-W Products revived, again offering sale of many civilian products suspended during the war. Group Life Insurance adapted superseding Employees Mutual Benefit Society operating since 1887.

1947--Cleveland Central District office moved to St. Clair Avenue. New warehouse erected for Cleveland plant. Additional synthetic resin varnish kettle. Linseed Oil Solvent Extraction process equipment installed. Extensive additions to Chicago Paint, Varnish, Lacquer, Chemical Products, and

(54)

- 1947-- Dry Color Departments. White lead manufacture discontinued at Chicago. Building used for new white enamel department. Newark installed two synthetic resin varnish kettles. Oakland installed two synthetic resin varnish kettles. Los Angeles additions to paint manufacturing equipment. Factory established at Mexico City. New label design adopted for SWP and other products. Lithograph cans first used for some Trade Sales products.
- Mr. Whittlessey completed 60 years of active service, retired, still continuing as a Vice President and Director. Employee Retirement Plan adopted for Sherwin-Williams Co. and the United States Affiliated Companies. This plan supersedes the pension plan in force since 1911. Capital increased to \$80,000,000.
- 1948--Sales office moved from Kensington to 300 West Lake Street, downtown Chicago. Old Chicago boiler house converted to varnish storage adding 400,000 gallons additional capacity. Kan-Gle put on the market in new patented circle seal can. Manufacturing plant erected at Mexico City. Enlargement and modernization of Brazilian plant completed.
- 1949--Property acquired for factory in Atlanta, Ga. Warehouse building erected. New warehouse building at Gibbstown. Extensive additions to plant at Dallas, Texas. Day-Ole and Painter Maintenance F 80 line added to Trade Sales products.
- 1950--Super Kan-Tone put on the market. Alkyd varnish kettle installed at Newark. New equipment for refrigerator and venetian blind enamel erected at Chicago, Newark, Detroit, and Los Angeles.

(55)

1951--Printing and Sampling Department moved to new plant at North Olmsted, Ohio. 70,000 square feet floor space, complete with new and modern equipment for printing, printing sheets, and making sample cards. 875 employees. Extended Cleveland factory office and technical department into space vacated by Printing and Sampling Department.

New raw material warehouse at Gibbstown. Additional raw material warehouse provided at Dayton. Synthetic varnish kettle installed. Remodeled paint-making equipment at Detroit. Added ballroller mills and tanks at Dallas. Installed Super Kem-Tone manufacturing equipment at Oakland. Converted insecticide plant to warehouse. Installed tin can manufacturing equipment at Hubbard, Ohio.

1952--Additional finished stock warehouse completed at Gibbstown. Super Kem-Tone manufacturing equipment added. Installed equipment for manufacturing Super Kem-Tone at Dayton. Added equipment for making lithographed cans at Hubbard, Ohio.
