

PRESIDENT

VICE-PRESIDENT AND SECRETARY

DAYTON F 2, OHIO, U.S.A.

MANUFACTURERS OF PAINTS, VARNISHES AND LACQUERS

Dr. Robert A. Kehoe,
Kettering Laboratory of Applied Physiology,
College of Medicine,
University of Cincinnati,
Cincinnati, Ohio.

After receiving your letter of the 16th I turned it over to our General Superintendent, Mr. Fasig, and our Personnel Director, Mr. Blue, for study. Today we have discussed your recommendations and also the results we have had from an interview with a local physician who we believe is competent to do the work that we have in mind. We agree with your statement that there is no good object in considering physical examinations unless a competent doctor is available to do that work.

1. Chemical urinalysis.
2. Routine blood tests.
3. Kahn or Klein tests for venereal disease.
4. Check heart and blood pressure.
5. Check lungs, including X-ray where desirable.
6. General checking for physical defects.

It seems to us this would be quite a step in addition to what we have been doing in the past and probably would be as far as it would be advisable for us to go at this time.

Yours very truly,

Nakoh

DAK-REM F.

PLEASE MARK REPLY FOR THE ATTENTION OF THE SIGNER OF THIS LETTER
