This memo is to confirm our phone conversation of 11/24/70 concerning biphenyl analyses.

Two biphenyl samples were examined by GC. These were Lot AM-160, representing May, 1970, production, and NATX-21249, dated about 11/2/70. The Aroclor 1260 manufactured in May was of good quality.

No significant differences were observed between the two samples by GC. It appears unlikely that a volatile organic impurity is causing current manufacturing problems.
